PROVIDE WATER IN THE PASTURE

The Famous Garden City Feeder

THE FEEDER is the MOST IMPORTANT part of your threshing rig. The work of the separator depends almost entirely upon the work of the feeder; therefore, you should be SURE that your feeder is a REAL FEEDER, not merely a contraption to cut the bands and carry the grain to the cylinder.

The Feeder that has Brains

is equipped with a Governor that ACTS BEFORE the grain gets out of the feeder and PREVENTS any reduction of the cylinder speed. The Governor on other feeders ACTS AFTER the grain has been dumped upon the cylinder, and AFTER the damage has been done.

An OUNCE of Prevention is worth a POUND of Cure.

THE GARDEN CITY FEEDER prevents trouble; other feeders make trouble and then try to cure it. How about yours? You cannot afford to start out again with the same old trouble-maker. It will pay to throw it off and get a GARDEN CITY FEEDER.

We also sell the CASWELL BELT GUIDE. Satisfaction guaranteed or your money back.

REGINA, Sask.

BRANDON, Man.

Mixed Farming Special

Conducted by Alberta Department of Agriculture and assisted by Dominion Department of Agriculture, Canadian Pacific Railway Company, Canadian Northern Railway Company and Grand Trunk Pacific Railway Company.

Special lectures and demonstrations on all phases of farm work.

Subjects—Livestock, Field Husbandry, Poultry, Dairying, Game Protection. Special Exhibits from Demonstration Farms and Schools of Agriculture. Household Science and Home Making. Train will stop for half a day at each of the following places:—

CROW'S NEST LINE, C.P.R.

Cowley Friday, June 23
Pincher Friday, June 23
Lethbridge Saturday, June 24
Macleod Saturday, June 24

MACLEOD-CALGARY LINE, C.P.R.

Granum Monday, June 26
Clareholm Monday, June 26
Stavely Tuesday, June 27
Parkland Tuesday, June 27
Nanton Wednesday, June 28

Kitacoty Wednesday, July 26
Lloydminster Thursday, July 27

This Special Train will consist of fourteen cars, including two cars of Pure Bred Horses and Cattle to be used for judging and demonstration purposes; other cars will contain Exhibits upon which demonstrations and lectures will be given on different phases of Agricultural Work and Domestic Science.

Amongst other things these Exhibits will include Models of Farm Buildings suitable for dairy cattle, hogs, sheep and poultry, also Veterinary Exhibits. There will also be Exhibits of Game, Grains, Grasses, Weeds, Samples of Students' Work at the Agricultural Schools, Dairy Products and Farm Dairy Equipment.

FARM WOMEN'S SECTION

There will be one car containing Exhibits from the Household Science Departments of the Schools of Agriculture and another under the direction of the Women's Institute Department, where demonstrations will be given in cooking and in the canning of fruits, vegetables, meats and soups. A special nursery car will be provided for the children so that the mothers may be free to attend the lectures and demonstrations.

LOUDEN
HAY TOOLS

LOUDEN
HAY TOOLS

FOR QUICK WORK

The Loudon Carry-All Sling Carrier is the heaviest and strongest Carrier made. It is constructed to work in any type or size of barn, and to carry large heavy loads.

Tested under loads weighing over 3,000 pounds, and with all kinds of power it made good. In hundreds of barns it has proved its efficiency and its strength.

Rope wheel in Carrier is 10 inches in diameter, and is roller bearing.

Track wheels on Tread 3 inches in diameter.

Bearing surface on Track 19 1/2 inches. Carries Slings within 26 inches of the Track.

The Loudon Senior Hay Fork Carrier meets the demand for a Carrier possessing that extra strength and power necessary for the safe handling of extra big loads. It is a Swivel carrier and will do excellent work, whether the hay is taken up from the end of the barn or from a centre driveway.

Rope wheels are 7 inches in diameter and are fitted with Roller bearings.

Track wheels on tread 3 inches in diameter.

Bearing surface on Track 15 inches. Carries Fork within 20 inches of the track.

ONTARIO FRUIT

Is Quality Fruit

That delicious flavor which remains a delightful memory long after fruit has been eaten is a prime quality of Ontario apples, plums, peaches, pears and grapes. There is something in the soil and climate of old Ontario which imparts to fruit an unexcelled flavor.

APPLES!

Other climes may produce larger or more highly colored fruit, but no country has achieved that combination of excellent qualities which has justly made Ontario apples famous. Texture, flavor, juiciness and ripeness existing together constitute that characteristic of Ontario apples—lusciousness. Apple growers of Ontario are looking forward to a good crop again this year. The condition of the trees gives every promise of good yield, high quality and early maturity.

Grain Growers' Associations have purchased largely from Ontario in the past and have been well satisfied. Local Associations may place their orders thru The Grain Growers' Grain Company, Winnipeg, or may deal direct with the Co-operative Fruit Growers' Associations of Ontario. For list of Associations or further information, write:—

Saskatchewan Homemaker's Convention

Largest gathering of Homemakers that has yet assembled had inspiring time

A foreshadowing of the wider use of the university plant in the interests of women was the distinguishing feature of the address of welcome given by President Murray, of the Saskatchewan University, to the sixth annual convention of the Homemakers' clubs. As a beginning the domestic science course of the normal students would, during the next term, be given in the university, and from that the logical and inevitable next step would be the incorporation of domestic science in the regular university calendar. The announcement was greeted with loud applause, as was also his invitation to the convention to appoint a committee to confer with the directors of extension work on the best method of resuscitating the almost defunct library scheme launched some years back. The convention at which these auspicious beginning of things was mooted was the largest gathering of Homemakers which has yet assembled and one of the most enthusiastic. Thru a full program of interesting and inspiring addresses, listened to in the auditorium of the university and digested and discussed in the corridors and sitting room of the residence, the convention progressed to a triumphant conclusion on June 24. The work of the local societies found expression from time to time, and it was apparent that brains and hands had been active and led to important work

duction, while it almost immeasurably increased the keeping qualities of the eggs. A word was said, too, in relation to the different preparations by the use of which eggs could be kept until prices had risen. After experimenting with some thirty-five or forty different preparations, the Dominion government chemist had decided that nothing was as satisfactory for the preservation of eggs as lime water. About one-half a pound to a pound of quick lime should be allowed to a gallon of water and the preparation allowed to stand over night, when the top should be poured off and used to cover the eggs. It is best in the making of the lime water to pour boiling water over the lime. The eggs should be packed in crocks of not greater than eight gallon capacity, and preferably about four or five, with the small end down. Water glass was another very satisfactory preparation for those who did not want the bother of preparing lime water. Professor Baker also spoke very disparagingly of the practice of changing cockerels every year and getting birds quite unrelated to the flock. While this practice insured vitality in the birds it resulted in a hit and miss collection of fowl without any fixed characteristics.

Mrs. Motherwell's Address

Mrs. W. R. Motherwell, in a carefully prepared paper, traced the beginnings

The remains of the German Zeppelin, L. 20, which was wrecked on the Norwegian shore. Some idea of the immense size of the airship can be obtained by comparing the wreckage with the people in the boat.

of a local and patriotic nature. Almost prodigious sums of money had been raised by different clubs with small but enthusiastic membership, and disbursed with a lavish hand for community and country. Miss DeLury, as director of extension work for women, reported the number of clubs in existence increased during the year from 130 to 160, that 93 visits had been paid to clubs, and twelve short courses given

Poultry Growing Scarce

Professor Baker slipped away from a Better Farming special to give at the opening session his annual address on poultry raising, without which no Homemakers' convention would be complete. He brought welcome news to the producers of eggs and poultry to the effect that both are scarce and growing more so. The shortage is directly traceable to the war, except in regard to turkeys, where the falling off seems due rather to a sudden lack of interest in producing these birds. The professor advised any woman present who had not a turkey and wanted one for Christmas to hasten forth and take out a mortgage on one against a day of much higher prices. In view of the urgent demand for eggs to be sent overseas, Professor Baker emphasized once again the importance of shipping infertile eggs. Excluding the male bird from the flock did not, he said, decrease the egg pro-

duction of social purity and civic and national honor to the home, from which radiates every good influence. At the same time she sounded a note of warning against the danger of women with their new-found power of the franchise feeling that they must destroy before they can construct. But when once they are assured that certain reforms are urgent they must have the courage of their convictions and in no uncertain manner set about to bring them to pass.

Gracious Effects of Music

Miss L. A. Phillips, in a lecture on "Music in the Home," demonstrated most charmingly that good music need not necessarily be dull and beyond the understanding of the untrained ear. After tracing briefly some interesting historical instances of the influence of music and telling of the humble beginnings of many musicians of note, she called upon a number of talented people from Saskatoon to illustrate the charm of simple, wholesome music. One of the favorite numbers was a motion song by two little folks, while that old song from Shakespeare, "I know a bank whereon the wild thyme grows," met with scarcely less appreciation. In speaking of musical instruments, Miss Phillips made it clear that in her opinion the humblest was not to be despised. Even the tin whistle, she said, had an-

The Grain Growers' Guide

Winnipeg, Wednesday, June 28th, 1916

ADDITIONAL TAX ON FARMERS

In a new catalog issued a few days ago by the co-operative department of The Grain Growers' Grain Company appears the following startling statement:—

"We have found it impossible to do business with Canadian manufacturers of some of the lines that we handle. Generally, they seem to rely on the protection of the Customs Tariff to secure the prices they demand which has forced us to make many of our business connections in the United States. We have in the past year imported large quantities of supplies from this source. Now we are faced with another set of conditions. The Customs Department thru their Appraisers and Special Agents fix arbitrary values—for duty purposes—on the commodities we import. The Special Agents of the Department go to the manufacturer in the States 'to investigate conditions' and in no less than five cases the American manufacturers have received letters from Ottawa informing them that they must invoice as per the instructions of the Department. In the case of the 'Grain Growers' Special Tractor,' we now pay a duty of 20 per cent and a war tax of 7½ per cent. on \$125 in excess of our contract price with the manufacturers. Wagons, Fanning-Mills, Gasoline Engines and Separators are subject to the same arbitrary procedure. How much farther this method will be carried we do not know.

To put the matter in simple and concrete form the Department of Customs at Ottawa has said in effect to The Grain Growers' Grain Company:—"You must not buy your tractor, wagons, fanning-mills, gasoline engines and separators from American manufacturers. If you do you must pay an extra fine over and above the regular protective tariff for so doing." To give some appearance of legality to this high-handed proceeding the Department of Customs has invoked a tariff regulation known as the "dumping clause." The section of the clause applied to this case is as follows:—

"In the case of articles exported to Canada, of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada be less than the fair market value of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the time of its exportation to Canada, there shall, in addition to the duties otherwise established, be levied, collected and paid on such article, on its importation into Canada, a special duty (or dumping duty) equal to the difference between the said selling price of the article for export and the said fair market value thereof for home consumption; and such special duty (or dumping duty) shall be levied, collected and paid on such article altho it is not otherwise dutiable."

Now this clause provides that before any special duty can be added to the regular tariff tax it must be in a case where the article is sold to Canadian importers at a lower price than it is sold for use in the United States. The Grain Growers' Grain Company have bought their various engines and implements at the regular wholesale price at which they are sold in the United States and their own investigation shows conclusively that the manufacturers of their engines and machinery are not "dumping" their product into Canada at a cut price.

It is quite obvious that the customs department would not act in this manner unless upon complaint of some Canadian manufacturers who do not relish the competition which The Grain Growers' Grain Company has afforded them. Manufacturers of agricultural implements in Canada have been highly protected for many years, yet large quantities of American made machinery have come into Canada over the tariff wall every year. The Canadian made machinery sells at the same price as the American made, the only difference being that in the case of American made machinery the tariff tax goes into the public treasury and in the case of Canadian made machinery the tariff tax goes into the manufacturer's pocket. But not being content the manufacturers have now induced the

customs department to put an extra tax on the machinery which the Western farmer has to buy. It has resolved itself to a considerable extent into a "dog in the manger" policy by which a number of Canadian manufacturers refuse to sell to the farmers' companies and have invoked the aid of the customs department to prevent the farmers' companies from buying in the United States. It practically puts the customs department in the position of chore boy to the Canadian manufacturers. If our Western members of parliament, both Conservative and Liberal, permit this gross injustice to pass without the most vigorous protest they are capable of making they cannot be considered as true representatives of the Western people. Even if the American manufacturers were selling at a lower price than they sell in the States (which in this case they are not) it would hardly be consistent to put a special tax upon the Canadian farmers who buy these implements. The fact is that our own Canadian manufacturers of agricultural implements do exactly the same thing. They sell their products for export to South Africa, Australia, New Zealand and Europe at lower prices than they sell for use in Canada. This has been demonstrated several times. It is also provided in the customs regulations that when our Canadian manufacturers export their product they get a rebate of 99% of the duty paid on the raw material entering into their product. Now they are doing exactly the same thing that they complain the American manufacturers are doing. The Grain Growers' Grain Company, however, have proved conclusively by investigation that in this case the American manufacturers are not selling at less than the home market price. It is to all appearances merely a case of the Minister of Customs using his arbitrary power for the benefit of a few manufacturers in eastern Canada. To give some idea of what the tariff tax on farm machinery amounts to we herewith reproduce another statement from The Grain Growers' Grain Company's catalog:—

"For your information the following figures show the actual duty paid on various articles listed in this Catalog:—

	Duty.
Grain Growers' Special Tractor	\$204.61
Wagons	\$17.55 to 20.75
Buggies	\$17.55 to 20.75
Gas Engines, 1½ H.P.	11.40
Gas Engines, 2½ H.P.	15.78
Gas Engines, 4 H.P.	26.80
Gas Engines, 6 H.P.	34.80
Gang Plow, 2 bottom, 12 in.	11.00
Gang Plow, 2 bottom, 14 in.	11.28
Gang Plow, 3 bottom, 12 in.	17.89
Gang Plow, 3 bottom, 14 in.	18.29

This shows the actual amount of tariff tax on these various engines and implements which The Grain Growers' Grain Company is selling. The same amount of tariff tax is contained in similar machines and implements made in Canada. If any farmers have had any doubt in their mind as to what the tariff is costing them these figures and facts will settle the matter definitely.

OUR EIGHTH ANNIVERSARY

The Grain Growers' Guide was born in June, 1908, and this issue, therefore, celebrates its eighth anniversary. It is a matter of no little pride to those engaged in the publication of The Guide and we also believe to the farmers' organizations which support it that The Guide has made an exceptional record of progress during its eight years. It was brought into existence because the organized farmers felt that they needed a paper of their own to assist them in putting their case before the farmers of the West and the public generally, and building up a powerful farmers' organization for the improvement of agricultural

conditions. Without claiming any degree of perfection it will be generally admitted that The Grain Growers' Guide has pretty faithfully performed its function of working for the interests of the organized farmers. Today there are in the Prairie Provinces three great farmers' associations numbering over 50,000 members and three great farmers' grain companies with over 45,000 shareholders, the majority of whom of course are also members of the associations. These great farmers' organizations have helped to build up The Guide to the very prominent place it holds now among the farm papers of Canada and on the other hand The Guide has helped each one of these organizations to develop to their present powerful position. These six farmers' companies and associations with their own paper The Grain Growers' Guide represent the most widespread farmers' organization in the world, probably the strongest financially and one of the very strongest in numbers. The early years of struggle and doubt have been successfully passed and every one of our organizations is now on a sound footing. Their leaders have been trained in the hard school of practical experience and are wiser and more capable than in the beginning. It would require considerable space to enumerate the splendid work done by the farmers' organizations and the benefits they have secured for the farmers of the West. We must turn to the poet, however, to picture the future:—

"But grand as are these victories
Whose monuments we see,
They are but as the dawn which speaks
Of noontide yet to be."

Under wise direction and with the loyal support of the farmers to their own institutions the next five years should see no less than 100,000 farmers linked up in these great organizations and The Grain Growers' Guide should, instead of having 34,000 subscribers as today, reach at least 75,000 farm homes and possibly 100,000. To reach these numbers is not in itself anything great to aim at but to get 100,000 farmers together working for mutual interest and for the benefit of agriculture and the improvement of our public life is one of the greatest achievements that we can strive for. Let us each lend a hand to make this country the happy, contented and prosperous land that the Creator intended it to be.

THE RAILWAY PROMOTERS' TAX

While the tax on the profits of corporations thruout Canada is not an ideal one it is, nevertheless, as we have pointed out in these columns before, the best system of taxation we have had in Canada up to the present time for raising public revenues. It is the nearest to direct taxation that we have come to in the federal field and as the shareholders in these corporations see the profits they have been accustomed to partly drawn into the public treasury they will naturally be inclined to give closer attention to public expenditures. It was anticipated by the finance minister when he proposed this new system of taxation that it would provide approximately \$25,000,000 revenue to the public treasury. During the same session of parliament the government was authorized to loan \$15,000,000 to the Canadian Northern Railway and \$8,000,000 to the Grand Trunk Pacific Railway to save these two roads from financial disaster. Altho these two donations are politely called "loans" very few people have any anticipation that the government will ever get any return from them, but that they will be in the nature of gifts to these two institutions that have already profited to such an enormous extent from the

public treasury. Thus it figures out that the direct tax upon corporations will practically be for the benefit of the promoters of these two railway companies. The shareholders of all the big corporations thruout Canada will thus have the pleasure of knowing that when \$25,000,000 is taken out of their pockets by this new tax it is for the benefit of railway promoters almost entirely and will not be used for the conduct of public business nor for the prosecution of the war to a victorious conclusion. From present indications the three farmers' companies in Western Canada will contribute a considerable portion of their profits to this new corporation tax fund and all the farmers who are shareholders in these companies will have an opportunity to ask themselves whether they like this system of being taxed for the benefit of railway promoters who have already taxed them to an extent unprecedented in all history.

GROW YOUR OWN FOOD

It continues to be a matter of surprise and comment that on so many farms in the West there is not a good kitchen garden every year. Thruout the country a great many fine vegetable gardens can be seen and there should be one on every farm. A garden that can supply all the vegetables required in the household and a good stock for the winter can be grown with very little labor. From the standpoint of dollars and cents also it is a good investment because it will save the purchase of a large quantity of other articles of food. The health of the family will also be greatly improved by a better variety of vegetable diet. By following modern canning methods the vegetable supply of the summer can be made available all thru the winter at a much lower cost than the commercial article can be purchased. By expending a little labor during the summer and canning the product in the fall every household can have a good

supply of fresh vegetables grown on their own farm for use during every week thruout the year. It is only now becoming generally known that practically every farm vegetable including all kinds of greens can be canned on the farm quite as easily and far more cheaply than they can be purchased. When this practice becomes general and the policy of "grow your own food" is widely accepted it will have a remarkably beneficial effect in reducing the cost of living in this country.

COMPLAINTS AGAINST BANKS

We have announced in The Guide previously that there will be an all-day conference in Winnipeg in the next few weeks between the leaders of the organized farmers and the Bankers' Association. At the conference the various problems that arise between the farmers and the banks will be thoroughly discussed with the aim of arriving at a policy that will be satisfactory to both the banks and the farmers. The editor of The Guide has been asked to present at the meeting any complaints the farmers have as to the treatment received from the banks in the West. We want to know whether the banks are giving satisfactory service and if not, wherein they are failing. Every farmer who is not getting satisfactory service in every way from his local banker should send a letter at once to the Editor of The Guide giving the facts of the situation. His name will not be divulged but the matter will be taken up at the bankers' meeting and an understanding arrived at. These letters should be sent just as soon as possible and addressed to the Editor of The Grain Growers' Guide, Winnipeg, Man.

There is a bill now before the United States Congress for compulsory federal grain inspection and standardization of grades all over the States. The farmers' organizations in the States are supporting the bill and many of

the grain dealers, tho it is being opposed by a number of exporters.

We still get requests frequently in regard to the customs tariff. Any farmer who would like a copy of the Customs Tariff Act and Schedule can get it free by writing a postcard or letter to the Department of Customs, Ottawa. He will then be able to tell the exact rate of duty charged on any article imported into Canada. This Act and Schedule will not, however, show the secret regulations of the Department of Customs by which they exact much higher duties than the law provides.

The line elevator companies announced before the Board of Grain Commissioners that the so-called "hybrid" ticket had been in use since 1906 tho it was only approved by the Board of Grain Commissioners two years ago. The elevator companies maintained that by the use of this ticket they could do business more cheaply and they had given the farmers the benefit of this by reducing the charges at local elevators from $1\frac{3}{4}$ cents to $1\frac{1}{4}$ cents. They forgot to mention, however, that while they had been using the "hybrid" ticket for ten years it is only one year since they reduced the local charges to the farmer. They have had therefore nine years' harvest on the use of this ticket and even tho they have reduced the charges it is quite apparent there is still a considerable harvest to which the farmers are entitled.

If you have done no careful seed selection to improve the quality of your seed it would be well to begin this year. Get in touch with the Canadian Seed Growers' Association, Canadian Building, Ottawa, and get their literature. It will show you the best method of seed selection and prove to you the benefits it will bring in dollars and cents.

CLEARING THE ROAD FROM PRODUCER TO CONSUMER

Combination Threshing Outfits

Letters from farmers show that the combination threshing outfit or small separator and tractor is rapidly gaining favor in the west

Outfits like this can be readily moved from set to set by a team. This outfit threshed 1,110 bushels of wheat in the bin and 5,000 bushels of oats in 180 hours. Cost of threshing averages around 4 cents per bushel for wheat and 2 to 2½ cents for oats.

Improvements are constantly being added to these outfits. This one is equipped with a different shaped wind stacker, designed as the result of last season's experience, and a pair of extra trucks set in the center of the body help take up vibration.

Unquestionably farming in the West is tending towards the working of smaller areas of land. Not only is it being realized that to keep the land from becoming full of weeds and unproductive more intensive methods have to be used, but existing conditions, such as the shortage of help and frequently weather conditions, are aiding to rapidly bring farms down to a size where they can be economically worked. The labor problem has always been one of the western farmer's chief hindrances, and to cope in some measure with it large steam and later gasoline engines were extensively used to aid in putting large areas of land under cultivation. For many reasons the large power outfits are not practical on any but a comparatively few farms where circumstances are specially suited to their use, and two or three years ago the interest of farmers changed to the use of a small power outfit, one capable of doing the work of a four-horse team. Naturally, with the reduction in the power unit, the work done or the machines run by it had to be correspondingly reduced in size. Hence among other farm machines grain separators are now on the market which are suitable to be run by the small tractor. A further development has been the combination of the small separator with the small engine on the same base, making a complete threshing outfit mounted on trucks. Small combination threshing outfits have been in use on western farms for two or three seasons and have amply proved their value as part of the regular equipment of every farm. In order to get first-hand information as to the value of combination threshing outfits, a large number of farmers who have operated these for one or more seasons were written to. Each of the twenty replies received is perfectly satisfied with the results from the use of the machine. There are many advantages noted, and some of the letters which follow will give a clear outline of the users' opinions concerning their outfit. Summarized, the chief advantages are that a much cleaner and more thorough job can be done with the combination outfit than with the ordinary cus-

tom threshing outfit; the work can be done just exactly when and where desired; only one or two extra men are required to run the whole outfit; when weather is unfavorable all the help can easily be put to other work on the farm; threshing can be done very much cheaper; the engine can be used for odd jobs round the farm, such as grinding, pumping, sawing, etc., all the rest of the year, and the price of most machines is well within the means of any average farmer. The following letters

get it done when and how I want it without having my grain put out in the straw and wasted. You can get started to thresh a week earlier with the small rig, as the large one waits until the grain is all ready before they will start out, while with the small outfit you can start up on your first cutting and have a car threshed and shipped by the time they are ready to start. I have been the first to ship from this district for the last three years and have made as high as ten cents a bushel by being able to do so, as the early price is quite often the best. You only need a few men to run one, and if a shower comes along and stops operations you can always set them at something that will pay, and so keep them working all the time. As soon as you get a strip cleared you can put your teams to work odd spells on the land.

Capacity of Machine

My machine is a 28-inch cylinder with an eight horse power engine, hand fed with straw carriers. We thresh from 400 to 500 bushels of wheat in ten hours, and from 1,000 to 1,200 bushels of oats, at a cost of from 4 to 4½ cents per bushel for wheat and 1½ to 1¾ cents per bushel for oats. It takes four men and two teams to run it. Sometimes we use an extra horse for bucking straw away. We sometimes do a little threshing for the neighbors and generally make enough to pay our expenses for hired help as well as enough to pay for our machine besides. If I had to go back to the worry of depending on someone to thresh for me I would be tempted to quit farming.

We also find the engine is worth all we paid for it for grain chopping, sawing wood, etc., as we can do these jobs at odd times, and we do not lose the time we used to by taking this work away from home, which is a great saving to us. Summing it all up, we get a better job of threshing done, our grain cleaned better, not so much wasted and done just when we want it without all the worry and suspense of wondering whether we were going to get it done at all or not, and then having

Combination thresher equipped with blower. This attachment requires the use of a higher powered engine.

give the experiences of users of combination threshing outfits during the past season:

Start Earlier to Thresh

I have been using the small threshing outfit for the past three years, and say positively that the individual machine is the most satisfactory rig. I was nearly on the rocks by being disappointed in not getting a machine when I wanted it, but since buying all this has changed, and now I am able to

The large custom outfit is indispensable in many districts. They do a quick job and the quality of the work done depends almost entirely upon the men running the machines.

Grain separator designed for use with the 15 to 20 h.p. light tractors which are coming into more general use on farms thru the West

Making The Grain Growers' Guide

Interior of general advertising and editorial office.

Interior of circulation department.

Many farmers and their wives visit The Guide office every year, and are always interested in watching the various processes which are necessary in preparing The Grain Growers' Guide for its readers. It is because of this fact, and that the greater portion of The Guide readers will never have the opportunity of visiting The Guide plant, that in this issue a number of the most interesting scenes in The Guide plant are shown on these pages. This issue of The Guide represents the eighth anniversary of the paper. In June, 1908, the first issue of The Guide was published in a small monthly edition. At that time The Guide had neither office nor printing plant nor staff. In the eight years that have intervened The Guide has become a weekly farm paper of the foremost rank in all Canada, and the plant in Winnipeg in which The Guide is published employs over eighty people regularly. In the advertising, editorial and circulation offices of The Guide alone more than twenty people are engaged the year round, while numerous writers scattered all over the country are engaged in preparing contributions for the paper.

At the present time one of the most serious problems in the publishing business is that of securing sufficient white paper on which to print. It requires from four and a half to ten tons per week, according to the number of pages in the paper, to print The Guide. There is a great shortage of paper all over the continent, and prices have jumped beyond anything ever previously known in this country. The kind of paper on which The Guide is printed formerly cost from 4½ to 5 cents per pound, while now it costs from 7½ to 8½ cents per pound. The white paper is the chief item of expense in publishing, and readers of The Guide will therefore see what a difference it will make in the cost of getting out the paper. This increase in cost will

mean an additional expense in publishing The Guide of about \$18,000 per year. The equipment in

Showing how the address labels are attached to each copy of The Guide. A small instrument, known as the "Dick Maller," is operated by the left hand. The labels are printed on a long roll of paper which is placed in the "maller" and is automatically gummed as it passes thru. The labels are cut and attached to the papers by this machine at the rate of several thousand per hour.

The Guide plant is the most modern that can be procured. Readers of The Guide will be interested to know that this \$150,000 printing and publishing plant is absolutely owned and controlled by the organized farmers, and that no politician and no capitalist has any voice of influence in it whatever. The Guide is not published for the purpose of making money, but to assist the organized farmers in carrying out their work. Year by year The Guide has improved its condition financially, and in the past twelve months has made better progress in every respect than ever before in its eight years' history. As The Guide becomes a financial success the profits made will be used to improve the paper and make it better for the service of its readers thruout the prairie provinces.

The underlines below each of the illustrations on these two pages will indicate what part of the office or printing plant is shown. Very few people who read The Guide probably have any clear idea as to the great amount of work that is necessary in order to prepare the 36 or 40 page paper that goes out regularly to the farm homes of the West. In fact, one farmer was heard to remark when he saw a picture of The Guide editorial staff that he didn't see what so many people were needed for. He had an idea that quite a number of them were drawing fat salaries and doing no work in return. If that same farmer were to spend a couple of hours going thru The Guide publishing plant he would change his mind, and would realize that every member of the staff is working for a living and giving good, honest return for the wages received.

When the present printing plant was built for the publication of The Guide in June, 1909, one year after the paper started, it was thought that it would be sufficient for at least ten years. The farmers' organization, however, grew more rapidly than any person would have prophesied. Three

One of the big presses on which The Guide is printed. Sheets of paper large enough to print eight pages are placed in the automatic feeder (1), the sheets pass down over the cylinder (2), and are rolled against the type pages (3), which do the printing.

The addressing machine. This is one of the most modern inventions for handling mailing lists. Each name is cut on a small fibre stencil about four inches long. About 40,000 of these stencils are filed in the cabinets shown at the right of the picture. They are run thru the machine where the girl is standing at the rate of 7,500 per hour, and print the name and address on a narrow strip of paper, which is then used in the "Dick Maller" shown in the picture above.

Eight pages of The Guide in type form all ready to go on the big press for printing.

After the various sections of The Guide are gathered in proper order in the bindery then they go to the stitching machines, as shown in this picture, where the little wire stitches are placed in the back to hold the pages together. These stitchers, like all other machinery in The Guide plant, are operated by electricity.

The trimming machine. When The Guide is all finished and before it is ready to mail the edges are all trimmed by a huge electrically operated knife.

A part of the mechanical staff of The Guide plant.

A portion of the bindery, showing where the various four-page and eight-page sections of The Guide are gathered together by hand in their proper order to make the complete paper.

One of the big folding machines. Large eight-page sheets are placed in this machine, which automatically folds them twice and throws them out in a pile.

times in seven years extensive additions have been made to The Guide plant until there is now no room for further additions, yet progress and growth continues. It is the hope of those in charge of the publication of The Guide that in the near future a new and even more modern plant will be erected which will be capable of enlargement and expansion to cope with the growth of the organized farmers' movement for some years to come.

Lack of space makes it impossible to enter into a detailed description of the processes necessary in the making of The Guide. Even the pictures on these pages will give but a very inadequate idea, as no machinery can be fully understood from a photograph. Some time in the future when a new plant is erected where photographs can be taken in better light and where the machinery and equipment is not so crowded, it is hoped that The Guide readers will be given illustrations to show even more clearly the methods by which The Guide is produced.

There are four natural divisions in the publication business. There is, first, the editorial department, where all news, correspondence from readers

Showing the completed Guide being delivered in mail bags to the post office for distribution throughout the country.

and articles from contributors are received and read and selected and edited. From the editorial department all these various contributions, which in a publishing plant are known as "copy," go direct to the printing department, where they are set in type and proofs pulled for approval by the editorial department.

Then there is the circulation department, whose duty it is to sell as many subscriptions as possible to farmers all over the country. The volume of correspondence in this department is very, very large. Local and travelling agents are working all over the country. The name of every subscriber is kept in this department on a stencil list in such a way that it is revised every week. The list also has to be arranged in such an order that The Guide when mailed will reach all the trains at the proper time in order that the paper shall reach the subscribers with the utmost promptness.

Third, but not the least important, comes the advertising department, whose duty is to sell as many advertisements as possible at a profitable price. It should be remembered that altho the subscription price of The Guide is \$1.50

4 H. P. Cushman on a Binder. Same Engine Does All Other Farm Work.

Cushman Binder Engines
For All Farm Work

This is the one successful binder engine. Thousands are in use every harvest. Fits any binder. Engine drives sickle and all machinery. Since horses have only to pull machine, two horses will easily handle 8-ft. binder in heavy grain. In a wet harvest Cushman Engine saves the crop, as it keeps sickle going when bull wheels slip—it never clogs. After harvest Cushman engine does all other work. Very light weight and easy to move around, yet runs more steadily than most heavy engines, because of Throttle Governor and perfect balance. 4 H. P. weighs only 190 lbs.; when stripped for binder only 167 lbs. 8 H. P. only 320 lbs. Forced water cooling system prevents overheating. Equipped with Friction Clutch Pulley.

Alex Irving, Cummings P. O., Vermillion, Alberta, writes: "I have been sawing wood with my Cushman lately and it has been working fine, no trouble to start. I am running an 8 inch L. H. C. grinder, which it handles nicely. I have put in a line shaft and run the churn, washing machine and cream separator. Everyone who sees it thinks it is the only engine."

SECRETARIES SHOULD BE BONDED

We have another appeal for help from one of our local unions, the appeal being to the effect that their late secretary has left the district and failed to hand over the funds of the union before doing so. In this case the loss to the union, unless the money is recovered, will amount to between \$30 and \$40, and the successor to the former secretary is naturally anxious to know what can be done. While such an occurrence is not common, it has unfortunately come to my knowledge more often than it should in the best interests of the reputation ordinarily enjoyed by the U.F.A. as an organization. We have again and again repeated our advice from the Central Office that all secretaries of our local unions should be under bond. A few of the unions have taken our advice, but the great majority are absolutely indifferent, and still others have been kind enough to write us suggesting that they did not desire to have anything to do with a graft of that nature.

Unite to Reduce Premium

At the present time, to bond your secretary will cost you 50¢ per \$100 of insurance, the minimum insurance being \$500, but if we received any sort of support from our unions, the cost per \$100 of insurance could be considerably reduced, and probably the minimum could be cut in half also. In other words, if we could count on 75 per cent. of our unions bonding their secretaries from year to year we could probably arrange to get a policy issued which would be sufficient to meet the requirements of the ordinary union for about \$1.50. If that were done, we would hear no more complaints such as the above, and in the event of anything happening the secretary and the union then finding that they had no account at the bank, its funds being in the name of the secretary himself, the union would secure its funds from the bonding company, and they would look after the other details, thus relieving the union of much worry and responsibility.

There is not a responsible commercial house in this or any other country that does not put its responsible officials under bond, not infrequently demanding it even of officials who do not directly have the handling of any money. The reason that this is done is not because those business houses are hand in glove with some insurance company, trying to make premiums for them, or because they do not have confidence in the people whom they require to take out these bonds, but because it is recognized as good business procedure and in the event of anything unforeseen happening, it is a safeguard to the shareholders and people who have put money into the concern, and whose money is being used by the directors as a trust in carrying on the business.

The U.F.A. is daily receiving more attention from commercial interests. Inquiries are being received almost every day at Dun's, Bradstreet's and other agencies in regard to the financial standing of this or the other union, and not infrequently of the Central Office itself, yet a few of our unions will persist in spoiling the credit of their fellow unions by continuing to handle their business in slipshod, haphazard methods rather than take, at little or no expense, those precautions which are recognized the world over as good business methods.

SUNDAY AT SEVEN PERSONS

We observed U.F.A. Sunday on May 21, and had our local minister, Mr. T. Smith and S. S. Dunham, of Lethbridge, address us. We hadn't a great crowd out, but I think we had the benefit of our money invested. We had a sale of home cooking on Friday, June 9, putting \$8.70 in our funds. We are planning a public picnic on July 12 with Whitla Local U.F.W.A., and hope by that time the weather will be settled and that we can make a success of it.

WAR RELIEF FUNDS

The following letters have been received from the various War Relief Societies, acknowledging donations recently sent them on behalf of our Association: Secretary, United Farmers of Alberta, Calgary.

Dear Sir:—I beg to acknowledge, with thanks, the generous donation of \$1,000 from the United Farmers of Alberta for the funds of our Red Cross Society. Will you extend our grateful thanks to all your members for their splendid help. It is most gratifying to us to know of the keen interest which is being taken in our work by the members of your society and its auxiliaries throughout the province.

M. PINKHAM,
 Honorary Sec.-Treas., Alberta
 Provincial Branch,
 Canadian Red Cross Society.
Belgian Relief Fund

Secretary, U.F.A.

Dear Sir:—We are in receipt of your favor of the 30th May enclosing cheque for \$117, being a contribution from the United Farmers of Alberta to our fund, for which we enclose official receipt. Will you kindly express to the members of your Association our most grateful thanks for this further generous contribution. It is indeed gratifying to us to know that we have your support and sympathy in our work.

Again thanking you.

Yours truly,

A. DEJARDIN,
 Secretary, Belgian Relief Fund.
Polish Relief Fund

Secretary, U.F.A.

Dear Sir:—We beg to thank you for your letter of the 30th instant, enclosing cheque for \$32, which we have forwarded to our Winnipeg branch for the credit of the Polish Relief Fund.

Yours truly,

M. SMELTZER,
 Manager, Bank of Montreal.

U.F.A. SUNDAY

F. Olsen, secretary of New Norway Local Union, No. 293, reports: I am pleased to give a report of our U.F.A. Sunday meetings, which were held in the New Norway Union Church on May 21. The morning service was conducted by Rev. G. A. Sanden of Highland Park. At noon a splendid lunch was served by the ladies. The afternoon service was conducted by Rev. P. Burgoyne of Dried Meat Lake, at which he gave a very interesting address, pointing out that obedience to God's commandments was the first step to thorough co-operation, and urging those present to take as much interest in religious meetings as they do in political and other meetings. A solo was rendered by Andrew Rockstad, accompanied by Mrs. Burgoyne, during the singing of which the secretary took up a collection for the Red Cross Fund, amounting to eight dollars. An hour was then given up to any members who cared to express their opinions in regard to President Wood's circular and also in regard to the resolution passed by the convention re U.F.A. Sunday. The meeting was brought to a close with a song by Mr. and Mrs. Sanden. The day was spent to the satisfaction of all present, which included a very large crowd.

NEW FORBESVILLE LOCAL

A meeting was held in the residence of J. H. Forbes on May 19 at which it was decided to form a local union of the U.F.A. to be known as the Forbesville Union. Theo Wagner was elected president, G. A. Brown, vice-president, and Geo. L. Rotherham, secretary-treasurer. Eleven members joined at the meeting and several others are expected to do so at the next meeting. The secretary was instructed to invite the member for this district to a meeting of the union to discuss road work, the urgent need of a new ferry and any other matters the union may deem advisable. It was decided that meetings should be held on the last Saturday of each month in the St. Margaret's school house at 2 p.m., commencing June 24. This union is situated on the Saskatchewan border, some of the members' post office addresses being Onion Lake, Sask., but all are farming in Alberta.

SPLENDID SERMON AT EYE HILL

Geo. Halstin, secretary of Eye Hill Local Union No. 553, reports that the idea of a U.F.A. Sunday caught on with that local. The Methodist pastor, Rev. J. N. Wilkinson, readily complied with a request to devote some of his time to matters particularly affecting the U.F.A. work. In a thoughtfully prepared and earnestly delivered discourse, the reverend gentleman drew an apt parallel between our own times and certain times in Jewish history, when the old prophets strove to restore social and economic justice in Israel. The preacher proved the necessity for the religious and economic salvation of a people being worked out together, and appealed to U.F.A. members to work hand in hand with the Church for the achievement of a common aim, pithily remarking that thus Christ's Kingdom would be brought to earth and the future would look after itself. In earnest and appealing words, Mr. Wilkinson asked the divine blessing upon all that was best in the U.F.A. Organization. We have never heard our respected pastor preach more powerfully than on this occasion. There was a large turnout of U.F.A. members and friends, belonging to several denominations, who from remarks overheard at the close of the service evidently appreciated the innovation. Special music was rendered by a quartette comprising Mrs. Hughes, Mrs. Irving and Messrs. J. and W. G. Farquharson, which proved an enjoyable feature.

PATRIOTIC FUND DONATION

Enclosed find draft \$104.50, \$4.50 for membership dues and \$100 to be applied on relief funds as follows:—

J. Parker, Red Cross, \$20; Belgian Relief, \$10; U.F.A. Patriotic Fund, \$10. A. Luchia, Red Cross, \$10. G. Munro, Belgian Relief, \$10. P. Shipper, Belgian Relief, \$10. P. Franke, Red Cross, \$5; Patriotic Fund, \$5. J. Lennox, Belgian Relief, \$10; W. Gardner, Belgian Relief, \$5; Red Cross, \$5.

HOMESTEADERS WANT WORK

"Every fall some of the homesteaders in this locality go south in Alberta and Saskatchewan for harvesting and threshing. Some of the members of our Local Union wished information regarding where they might find employment as early as haymaking time. If you could give me some advice on this it would be greatly appreciated."

The above is a letter from C. M. Bonar, of Flat Creek, Alberta, and anyone interested in securing help this fall, in the shape of a good practical homesteader, who knows something about farming, would do well to communicate with Mr. Bonar at the address mentioned.

U.F.A. SUNDAY ENJOYED

O. E. Jones, secretary of Prairie Dell Union No. 112, reports that the U.F.A. Sunday service held at Bruhns Hall, Stavely, by the various locals around Stavely was a decided success. J. W. Wilford was in the chair. The speakers, Messrs. C. A. Hearsey, Malehow, North and Marshall, pointed out that the farmers have always been of a Christian class, and are capable of being social leaders, also that the representatives of the people are usually found to be a fair sample of their electors; that the crying need of the present day is clean, honest government, and that it will be well for the farmers to cultivate high, Christian morals after which our representatives can be modeled.

The secretary of the union has been instructed to order goods from the Hudson's Bay Co. in large quantities, but no definite instructions have as yet come forward. An order has been placed for a large carload of binder twine with the Alberta Farmers' Co-operative Elevator Co. The members will also ship several cars of hogs thru this company during the week. Recent business includes the regular shipment of Galt coal, which is expected to arrive about June 15; 180 gallons of coal oil that has been distributed since April 1, and 7,500 cedar fence posts. The members have ordered three carloads of lumber direct. The local yards will compete with any price they can get, but the motto of this union is: "To sell or buy from the man who makes the price."

REPAIR YOUR IMPLEMENTS

The tremendous drain upon men and materials which the present world-wide war has occasioned is making itself felt in all lines of production. That many of the manufacturers of agricultural implements are finding serious difficulty not only in securing the necessary labor but also in securing raw materials as well and that the surplus stock in many lines has entirely disappeared is a well known fact to all who are informed of conditions as they are.

There is not apparently any serious danger of a famine of many kinds of farm implements during the present year, there is every likelihood of a shortage in some lines for the year 1917, and farmers throughout this western country will show good judgment and sound sense in looking over all implements and keeping them in proper repair, thus prolonging the life thereof as much as is possible. Above all, the time should now be past when any farmer will be so foolish as to permit himself to be persuaded by a smooth-tongued implement salesman to discard an implement which ought to be repaired. Many millions of dollars belonging to the farmers of this western country have been wasted in this manner. There are today many thousands of binders, separators, etc., standing around on the prairie, discarded and partially dismantled which ought to be in operation and which are quite capable of doing as good work as they have ever done, if put into proper repair. Many of the small villages scattered over the prairie contain machine shops which are fairly well equipped for the overhauling of machinery, including separators and engines, while our large centres, such as Regina, Moose Jaw and Saskatoon contain shops which are excellently equipped for such work.

Caring for the Binder

By way of illustration let us discuss the binder. There is, after all, very little to wear out about a self-binder. The writer has seen a binder which has cut twenty successive crops and is still doing good work. This particular binder had never been under cover from the day it left the warehouse. Apart from the canvasses, the most perishable parts of a binder should last from five to six years, and these perishable parts can be renewed for an expenditure which is a mere fraction of the cost of a new binder. It would appear that implement dealers have been more concerned with the making of new sales than they have with assisting the farmer to keep his implements in good repair and thus prolonging their lives. Such implements as binders and seeders perform on an average not more than ten days' work per year. Surely any well constructed implement working only ten days per year should last for a large number of years if properly cared for. This is as true of a separator as it is of a self-binder, and doubly true of an engine, particularly of a steam engine. A steam engine, if properly cared for and kept in repair with periodical renewal of certain perishable parts, should last any ordinary lifetime. An average threshing machine does not work over twenty full days per year; surely such a machine could be made to last for from fifteen to twenty years if properly cared for. It has been calculated that the average working life of a farm implement in Western Canada is less than half what it ought to be. Consider then the enormous wastage which is incurred and the heavy cost against production by the too early discarding of farm implements. A conservative estimate of this loss would place it at a number of millions of dollars per annum in Saskatchewan alone.

This is a subject which it would be well worth while for locals to discuss in meeting, for at this time, when the resources of the Empire are being strained to their utmost it is imperative that all wastage should be avoided. Truly "a penny saved is a penny earned."—J.B.M.

PRESIDENT'S ADDRESS IS MOOSE JAW

Since the head offices of the association have been moved to Regina a considerable number of letters intended for the President, J. A. Maharg, have been delivered at the office of the as-

Saskatchewan

This Section of The Guide is conducted officially for the Saskatchewan Grain Growers' Association by J. B. Musselman, Secretary, Regina, Sask., to whom all communications for this page should be sent.

sociation at Regina. Some of our members have had the impression that Mr. Maharg gives his time entirely to the association, and that he moved to Regina at the time the head offices were moved there. This, however, is not the case. While Mr. Maharg devotes a large amount of time to the work of the association he has at no time been regularly at the office. His address is still Moose Jaw as before and all letters intended for him should be addressed: J. A. Maharg, Moose Jaw, Sask.—J.B.M.

RURAL CREDITS

Central Secretary:—In Saskatchewan we have no system whereby we farmers can obtain financial assistance combined with that economy which is so essential to the successful production of our industry. It is true that there is a measure called the "Agricultural Credit Act of Saskatchewan" awaiting to be placed on record on our statute books, and then put into operation, if my information is correct; but that measure is in "Cold storage," where it is surely and gradually freezing to death, which is, in my humble opinion, justifiable homicide. There are some extremely objectionable features in this measure, chief among which is the necessary co-operation of ten farmers knowing one another's affairs, endorsing each other's credit individually and collectively, which would result in an enormous amount of delay before a measure of this nature can be successfully accomplished. Such a system may be advantageously operated in older countries, one would expect, where the farm property and its livestock and encumbrances are handed down generation after generation (hereditary, as it were), where the farm men and farm women and their children are so placed that they are thrown more and more into one another's society, but even there we do not find such a system as advocated.

Canada Like New Zealand

We in Canada are confronted with different conditions than those I have attempted to describe, but similar to the conditions that confronted the statesmen of New Zealand, Australia and Tasmania. When we realize the serious situation that confronted Premier Seddon of New Zealand in the early 'nineties, and the resultant successful piloting of his rural credit measures thru the financial panic that had seized the Australian continent, we notice how each separate state of Australia after this panic had been felt thru Australia and New Zealand, by foreseeing this crisis, weathered the storm with credit due to her. Australia gladly adopted these very same methods. Surely if there ever was a time to test the strength of this system of rural credits, that time was then at hand, and this system withstood that panic and successfully weathered the storm, and it is gratifying to know that that system has not only been enlarged, but also extended.

Quick Action Necessary

If you deem it wise would you ask every local of your G.G.A. to thoroughly thresh this subject out, and submit their view to the next annual convention in order that we may ask our government with no uncertain voice to place this system of rural credits which receives the endorsement of our delegates in convention assembled, in operation at once. Now to a delicate question. If they, the powers that be, refuse, then we mean to place men in the House who will fulfil our wishes. I wish to draw your attention to the urgency of this subject. We farmers have as much right to this economic necessity as our railroad magnates and city brothers in the successful floating of loans for city improvements. Surely we, the producers of wealth have a right to a sound system of rural credits, which would result in better homes, better sanitation, healthier children, better housing facilities for our

livestock, and some of the little advantages that our city brethren possess but which we are denied, which would result, or at least have a tendency to produce a more contented and prosperous community, and would help to solve the problem of keeping our boys and girls on the farm as an offset to the glamor of city life.

As the Manitoba G.G.A. seem to agree with the above mentioned solution of our rural credits I think we should pause before we adopt such a miserable system as advocated in our Saskatchewan Agricultural Credit Act.

I desire to add that any detailed statistics of the rural credits as adopted in New Zealand are to be found in a book called "The Economic Laws of New Zealand" I believe, which John-son Graham, of Hillview, has, and in conversation with him I have no doubt that he would only be too pleased to give you any assistance that you may require. I have not his post office address, but no doubt J. A. Maharg could give it to you.—Believe me, yours truly, A. HOWARD, Fiske G.G.A. Sec. Treas.

MEETINGS IN DISTRICT 15

Monday, July 3—Reimche, Kramer, Winnifred, Kincaid, Woodrow, Meyronne, Bellmuir, Thurlby, Mankato; Woodrow Co-op.—Meeting 8 p.m., Meyronne.

Tuesday, July 4—Milly, Varsity, Summersove, Glenedith—Meeting 3 p.m., Milly.

Wednesday, July 5—Reklaw, Coriander, Hillandale—Meeting 3 p.m., Reklaw.

Thursday, July 6—Roche Plain, Diebolt, White Water—Meeting 3 p.m., Roche Plain.

Friday, July 7—Waldville, Canuck, Amelia, Chamberry—Meeting 3 p.m., Waldville.

Saturday, July 8—Shaunavon, Instow, Scotsguard, Early, Admiral, Dollard—Meeting 3 p.m., Shaunavon.

Monday, July 10—Hazenmore, Cananea, Aneroid, Ponteix—Meeting 2.30 p.m., Aneroid.

Tuesday, July 11—Govanlock, Senate, Consul—Meeting Govanlock, after arrival of train.

Wednesday, July 12—Vidora, Cypress Lake, Range View—Meeting 2.30 p.m., Vidora; Ravenscrag, Robsart—Meeting 8 p.m., Ravenscrag.

Thursday, July 13—Eastend—Meeting 3 p.m., Eastend.

Friday, July 14—Westerleigh, Quimper, Warren—Meeting 2 p.m., Westerleigh; Cadillac, Crichton, Driscoll Lake—Meeting 8 p.m., Cadillac.

The above meetings will be attended by Thos. Sales and P. L. Craigen.

CANUCK ORGANIZED

Central Secretary:—I beg to submit report of our organization meeting held at Canuck on April 22 for the purpose of forming a branch of the S.G.G.A. The meeting was called to order by Acil Sedore. A. L. Smith was elected chairman and G. W. Patterson secretary of the meeting. The following officers were appointed: President, John Martin; secretary, S. Crowell; directors, Thomas Crossen, George McIlwaine, James Vanmar, Josiah Gunter, George Thornton, William Hunt. Enclosed find \$9.00 membership fees. A. L. Smith addressed the members on the Grain Growers' movement and then called on Mr. Spence to speak on the proposed railway thru this country.

S. CROWELL,
Sec'y Canuck Local.

PATRIOTIC DONATIONS

Enclosed please find money order for \$25.00, collected in this district for the Patriotic Fund.

W. KIMBER,
Sec'y Parkside G.G.A.

RIDER AGENTS WANTED

In every community to ride and exhibit a sample 1916 Hyslop Bicycle.
10 DAY'S TRIAL. If owner is not entirely satisfied after riding any Hyslop Bicycle 10 days it can be returned and money will be promptly refunded.
TWO CENTS is all it will cost to write us a postal and we will mail free, postpaid, catalogue and colored art folder showing complete line of bicycles, tires and supplies and particulars of most marvelous offer ever made on a bicycle. You will be astonished at our low prices and reasonable terms. **MAKE MONEY** taking orders for Bicycles, Tires and Sundries.
DO NOT BUY until you know what we can do for you. Write today.
HYSLOP BROTHERS, Limited
Dept. 23 TORONTO, ONT.

\$150

CASH PRIZES

Boys' and Girls' Seed

Selection Competition

The Grain Growers' Guide wants to find out where the best wheat and oats are grown in the Prairie Provinces. In order to discover this The Guide is going to pay \$150.00 in cash prizes to boys and girls who will assist in this work. Any boy or girl between 10 and 18 years of age (inclusive) living on a farm in Manitoba, Saskatchewan or Alberta may enter the competition. Each contestant may enter the competition for wheat and for oats, and any number may enter from the same family, provided only that no one person may win more than one prize.

The method of selecting the seed will be to go out into your father's grain where the crop is best, just before the binder starts, and select enough of the choicest heads of wheat or oats to thresh out two pounds of clean seed. Put these heads into a sack and pound them until the seed is threshed out. Then winnow them on a windy day, put them into a sack and mail them to The Guide.

The Guide will pay the postage on one sack for each contestant so that they will be under no expense whatever. The competition will close on September 15 and all sacks of grain must be in The Guide office by that date. They will then be judged by an expert grain inspector who has no connection with The Guide whatever and will be entirely disinterested.

The prizes will consist of \$150.00 in cash and will be divided as follows:

Prizes for Wheat:

1st Prize	\$25.00
2nd Prize	20.00
3rd Prize	15.00
4th Prize	10.00
5th Prize	8.00
6th Prize	7.00
7th Prize	6.00
8th Prize	5.00
9th Prize	4.00

Prizes for Oats:

1st Prize	\$20.00
2nd Prize	15.00
3rd Prize	10.00
4th Prize	5.00

This competition is being conducted by the Rural Improvement League of The Grain Growers' Guide. Every boy and girl who wishes to enter must become a member of the Rural Improvement League, which will cost nothing except a little work you can do for The Guide in your own community. Any boy or girl wishing to enter this competition and earn one of these cash prizes, which will be definitely paid out and mailed within two or three weeks after the close of the competition, should sign the attached coupon immediately. If you wait until the crop is ripe it will be too late for you to qualify as a member of the League. Sign the coupon and mail it today. We will reply promptly and tell you how to join the League and give you full instructions to help you select the best grain on your farm.

Secretary, Rural Improvement League,
Grain Growers' Guide,
Winnipeg, Man.

I would like to become a member of the Rural Improvement League and enter the \$150.00 prize competition for the selection of wheat and oats.

all communications for this page should be sent.

BIG EXCURSION ON JULY 7

The Portage la Prairie District Grain Growers' Association purpose holding their annual picnic and holiday at the Agricultural College, Winnipeg, on July 7. Excursion rates of a fare and a third have been arranged, and at all stations where there are ten or more tickets sold this rate will be granted. Local secretaries are requested to try and arrange that the required number of tickets be bought at their stations. All tickets are good for thirty days.

B. RICHARDSON,

Sec. P.L.P. District G.G. Ass'n.

Note.—This is a good opportunity for many to take advantage of the special rate and pleasant company in seeing the Agricultural College, and should make a very pleasant outing now that the rush of the season is over for a time.

HARTNEY PICNIC

The picnic held at Hartney on June 16 under the auspices of the Home Economics Society, the Agricultural Society and the Grain Growers' Association was a great success. Mrs. Dayton, of Virden, gave a very pleasing, practical and suggestive address setting forth some of the features that could be introduced into the home life that would tend to make it more profitable and enjoyable, and without doubt many of those who had the privilege of hearing her address would profit by the suggestion offered. President Reynolds, of the college, spoke on the subject of Rural Economics, outlining the plans and policy of the college and the contribution it was prepared to make towards the building up of a prosperous, intelligent and contented rural life. R. C. Henders, president of the Grain Growers' Association, followed on the contribution the Grain Growers had made, and were making towards the solution of rural problems, dealing with the questions of legislation that had been secured and giving a forecast of some of the most important problems confronting the farmers at the present moment, and the suggested methods of solution. These addresses were commented on as being full of useful suggestions, and those present felt that they were well repaid. A characteristic feature of the picnic was the intense interest and attention given to the speakers. The ladies provided a bountiful repast, and all who attended the gathering were of the opinion that they had been benefited both socially and mentally.

SUCCESSFUL OAK LAKE PICNIC

The Oak Lake Grain Growers' Association held a very enjoyable picnic on the grounds of the Agricultural Association on June 15. A fairly large and enthusiastic gathering greeted the speakers on this occasion. President R. C. Henders, of the Central Association, spoke on the principles of the Grain Growers' movement, and dealt with the legislation that has been secured already with good prospects of other legislation for the benefit of the farmers. F. J. Dixon, M.P.P., followed, speaking on Land Values Taxation, and acquitted himself in his usual style, covering every phase of the question in a way that all could understand. A bountiful repast was served by the Oak Lake ladies and the good things provided were enjoyed by all present. Oak Lake is to be congratulated on having such good accommodation for holding gatherings of this kind on the well laid out grounds of the Agricultural Association. The Oak Lake Association has an energetic secretary, who has done good work for their association.

RURAL MATTERS INTEREST CHURCHES

There is an awakening among the churches in regard to the solution of rural problems. As a result of the educational influence of the Grain Growers' Association with regard to the

study of economics, and particularly the study of rural problems, there is an increasing interest manifested by the churches. The Methodist Church in its annual conference assembled at Portage la Prairie last week, devoted an evening to the relationship of the Church to the study of the above question. At this meeting the conference invited President Henders, of the Grain Growers' Association, to preside. Principal Reynolds, of the Agricultural College, was the speaker of the evening. He delivered an address that was full of practical hints and suggestions, calculated to increase interest in rural life. The attention given and the interest manifested indicates that the churches are becoming fully awakened to the responsibilities that rest upon them along these lines.

MEETING AT SOMERSET

The Somerset News reports the meeting held there recently as follows:—"A very interesting address was given by Secretary McKenzie, of the Grain Growers' Association on Friday and listened to by a fairly large audience. He outlined the work the G.G.A. is doing for the farmer. In Manitoba the association has only about one-fifth of the farmers as members and in order to have the full benefits of co-operation, he urged that every farmer should be a member. Every other industry has its association to back it up, and the farmer should have his. The G.G.A. has done a great deal of good for the farming community during its existence. Speaking of Rural Credits, Mr. McKenzie explained the term and stated that the association had placed the matter before the government, and it is likely to come up at the next session of the legislature. Canada and the U.S. are the only two countries which have not got this system. The farmers here when they want to buy land or improve their farms, borrow money by mortgage and pay a rate of interest. Under any rural credits system, the farmer would be able to borrow money for a long term—say 20 years—and pay a low rate of interest. This rural credits system would, of course, be under government bond guarantee and the money so loaned would probably be raised by debentures or some similar method. In regard to Co-operation, he stated that the time had passed when the farmer had to stay year in and year out on the farm; it was only by hearing the experiences and difficulties of the other fellow and telling of his own that the farmer could improve and that is where the value of an association comes in, to get together at a central point and talk matters over, the local merchant as well as the farmer, and help each other."

COMING PICNIC AT ELM CREEK

Under the auspices of the Elm Creek Grain Growers' Association a picnic will be held in J. M. Kennedy's Grove (close to Elm Creek) on July 6, commencing at 2 p.m. R. C. Henders, provincial president; J. S. Wood, vice-president; F. J. Dixon, M.P.P.; E. A. August, M.P.P., and And. Graham, district representative, will be present and give addresses.

C. I. GRAHAM, Pres.,
H. GRAHAM, Sec.-Treas.,
Elm Creek G.G.A.

Note.—With so many good speakers present this picnic should be a very enjoyable affair. Good weather is all that is necessary to make it the best yet. Come and enjoy yourself.

NEW WHITEMOUTH BRANCH

A branch of the Manitoba Grain Growers' Association was organized at Whitemouth on Saturday, June 17. The meeting was held in the Municipal Hall, Whitemouth, and there were about sixty farmers present. A very instructive address was given by Secretary McKenzie, of the Central Association, which received close attention from

those present. After hearing this address on Co-operation and the aims and objects of the movement, it was unanimously decided to form a branch at this point. Forty-two of those present joined, of whom thirty-six paid in dues. The following are the officers elected:—President, Robt. Henderson; vice-president, John Larson; secretary-treasurer, E. Kirby. The directors elected were C. Alpers, Thos. Finnie, Wm. Henderson, Carl Huetteman, A. Latta and D. M. Wardrop. A hearty vote of thanks was extended to the chairman and Secretary McKenzie.

MOLINE ASSOCIATION

Secretary D. Dick, of the Moline Association, forwards their dues for fourteen members this week to the Central Office. The Moline branch has a new secretary in Mr. Dick.

SWAN VALLEY PICNIC

The Swan Valley district association will hold their annual picnic at Kenville on Friday, July 7. A good program is being prepared. R. McKenzie, provincial secretary, will be one of the speakers.

SOURIS DISTRICT CONVENTION

The branches in the Souris district hold their convention in Minto. All the branches in that district are expected to have one or more delegates in attendance. They have arranged for a good live program with good speakers familiar with the aims and objects of the Grain Growers' movement, and all who attend will, we feel sure, receive encouragement and inspiration for carrying on the work in their own branch. Do not overlook having your branch represented.

MEMBERSHIP DUES RECEIVED

The following branches have contributed their membership dues this past week:—Baldur, Russell, Poplar Point, Plum Coulee, Moline, Silvertown and Shadalee.

SOMERSET MEETING

R. McKenzie, secretary of the central association visited Somerset branch on the evening of June 9, and addressed the gathering on the subjects of Rural Credit and Co-operation among farmers.

AUSTRALIAN WHEAT COMMANDEERED

W. Francis Ahern, of Melbourne, Australia, in an exchange describes the method by which the Australian government has guaranteed the wheat crop of that entire commonwealth. He estimates that the wheat crop will be 150,000,000 bushels, of which 100,000,000 bushels will be exported. The government has commandeered the entire crop and has guaranteed to pay the farmers the full market value of the crop less only the actual cost of handling it. He states that the grain trade and the grain speculators have been very much upset by the action of the government, and have fought it very vigorously. The system described by Mr. Ahern states that the government is taking charge of the entire grain business. The farmer hauls his wheat to the nearest railway siding and receives a voucher from the government which entitles him to go to the nearest bank and draw a first payment of 72 cents per bushel immediately, the agreement being that the balance of whatever is realized for his wheat will be paid to him at the close of the season less the advance made at the time of delivery. All the wheat commandeered by the government will be pooled in one fund. Mr. Ahern gives no details as to the grading system. He states, however, that up to the end of February there had been advanced to the farmers \$57,890,000, and only half of the harvest had been gathered at that time. He says that it is the general expectation that the Australian farmers will net something like \$1.40 per bushel for their wheat, tho he says nothing regarding grades, and this requires further explanation. This is particularly gratifying to the Australian farmer, considering that the highest price they ever received before was in 1891, when they got \$1.19, but since that time it has fallen as low as 61 cents.

Grass Seeds

Can be sown to best advantage during the warm showery weather of June and July

Grasses we are Growing

Names of the above are all listed below, corresponding with numbers. Some of these are valuable for hay purposes and others are of greater value for pasturage.

	Per 100		Per 100		Per 100
1 Alopecurus pratensis (Meadow Foxtail)		8 Dactylis glomerata (Rough Cocksfoot or Orchard Grass)	\$20.00	14 Trifolium pratense (Red Clover)	\$25.00

On the Edge of the Barrens

By Stephen Allen Reynolds

Continued from Last Week

"You would—would you?" Buck interrupted himself long enough to grunt these words as he kicked the elbow of the prostrate West.

The walrus-hide sole of the mukluk crashed against the "funny-bone" of the whisky-runner. He uttered a groan and ceased his efforts to draw a weapon.

The coats of the crew piled in a heap, Buck then compelled his man to take away their sheath-knives. One by one, they were tossed into the water.

When he had seen the breeches pockets of the quartet turned wrong side out, the constable stooped and possessed himself of West's weapon. It was a short-barreled .44, fully loaded.

Buck "broke" the revolver, showering the prostrate man with the cartridges, and then, with a left-handed swing, he sent the weapon flying after the others.

"Get up!" were the constable's next words, punctuated by a kick. The toe of the sealskin boot caught the whisky-runner just below his empty pistol-pocket. He got up.

"Get out!" were the final words of the king's man. He withdrew a pace, sheathed his pistol, and folded his arms. Whisky West, crestfallen, fell back and joined his men. They staggered away

manoeuvre; but soon he was enlightened.

Upon the sloop the form of a man was visible at the rail—a shape dim and indistinct in the haze of morning. The atmosphere was not as clear as it had been an hour before. The sun was not shining as brightly; a fog was stealing in from the open bay. The whale-boat was no longer moving.

And then a wisp of smoke appeared above its gunwale, a "high-power" missile hissed its brief message in Buck's ear, followed closely by the unmistakable report of a big-calibered rifle.

"I certainly overlooked a bet," muttered the constable, surprised, yet by no means disappointed.

He arose from the rock, and in spite of the fact that he knew his red coat offered a shining mark against the skyline, he paused deliberately to knock the ashes from his pipe, while scowling seaward and estimating the range.

"It 'll be about four hundred—scant," he mused as he walked leisurely to fetch his carbine.

Another overhead whistle, followed by the resounding detonation, brought a grim smile to the constable's lips.

"To high—too high!" he whispered

One of the results of war. Women in Great Britain learning how to do farm work.

to their boat, the wounded man lingering behind. Hastily, with many backward glances, as if fearing a shot in the back, they slid the whale-boat into the water and clambered aboard.

They were a cable's length away before Buck moved. Then he sauntered over to the pile of coats, and heaved them one by one onto the kelp-covered, shining rocks below.

"Hit anything?" asked Napier, smiling faintly as Buck glanced in at the door.

"Nothing much," was the vague reply.

"I only heard you fire once."
"I hate to waste good ammunition," observed Buck.

A rapid survey of the interior of the barrack told him that both occupants were ignorant of what had happened at the water's edge, a scant hundred yards away.

Oclah was stuffing the plump teal with hardtack crumbs and bits of bacon, and the steel oven rested atop the kerosene stove. Napier lay quietly in his bunk, breathing easier, and seemingly in better spirits than he had been the night before.

Buck filled his pipe and strolled away. On a rocky knoll just above the barrack he seated himself to smoke, watch the departing whale-boat, and make plans for the forestalling of Whisky West.

Between three and four hundred yards away, about one-third of the distance covered between beach and sloop, the oar-blades of the whale boat ceased splashing, and the craft swung around broadside to the shore.

Buck watched the movement closely. He was at a loss to account for the

softly to himself as he gripped the walnut stock of his carbine.

Buck walked toward a flat-topped rock some forty yards distant from the barrack. Half-way, something plucked at the skirt of his tunic and went whistling on over the Barrens; but the constable neither hastened his pace nor glanced downward at the bullet-torn garment.

He was a fatalist if there ever was one.

The rock gained, Buck emptied his pockets of cartridges. He took off the red coat; not that he weighed the danger of wearing it, but because he needed something to shield his elbows from the rough surface.

Then he lay down.

Another bullet whizzed past and buried itself in the tundra a mile behind the constable. Buck paid scant heed to it. He found a comfortable position for his elbows. He pressed the butt of the carbine home in the hollow of his shoulder and laid a bronzed cheek on the plump comb of the weapon.

Knowing that from his elevated position he was liable to overshoot, he left his sight fixed, and fired point-blank at the midship figure in the whale-boat.

For a sighting shot it was good one. A tiny splash in the water near the shore-side of the boat told Buck's sharp eyes that he should aim at the heads of his targets.

Another puff of smoke from the boat was followed by a vicious ph-ut! as the steel-packed bullet scored the rock and showered Buck with granite-dust and bits of moss.

The constable spat. Then he gripped once more the stock of his carbine, and pressed a cheek to the comb. His gray

eye flashed along from sight to sight until the head of the midship figure was brought into alignment.

He pressed the trigger and a .303 "soft point" went tearing out to sea. One of the figures in the whale-boat melted from view.

"One!" said Buck to himself.

Again he shot home the bolt of the carbine and lined up the blued barrel with a human target. He was about to press the trigger, his lips were framed to pronounce "Two!" when from somewhere behind him came a slight rustling sound.

Without taking the weapon from his shoulder Buck turned his head and saw Oolah a dozen feet in his rear. She was clutching her fawnskin skirt with nervous fingers. Her face showed alarm, fear and surprise.

Never before had she seen shots fired in anger—Klaboonash trying to kill one another.

Buck raised his arm and waved the girl away.

"Get back in the house, Oolah," he called. "And don't say a word to the lad." The constable pressed a forefinger to his closed lips and waited to see his order obeyed.

Hesitating a moment, at a loss just what to do, the girl turned with pale cheeks and wide-opened eyes. She moved off slowly, reluctantly, while Bucked turned back to the grim work in hand.

Once more he covered a figure in the whale-boat, when from the turf ahead of him leaped up stones and soil and bits of jagged metal torn loose from the jacket of the ricocheting bullet.

The constable felt a stinging sensation above his eyes.

The warm blood trickled down from a deep scratch in his forehead. With the back of his hand he dashed the blood from his eyes and threw open the magazine cut-off.

Five times Buck fired, aiming at the centre of the group in the boat. The Barrens echoed to the shots, while two figures in the boat seemed to dissolve from view.

"Two! Three!" came grimly from the lips of the king's man as he crammed full his magazine.

No more shots came from the whale-boat. Two oars were thrust out. The eighteen-foot steering-oar bit into the water, and the craft's prow wore sluggishly around until it headed for the sloop, now almost invisible in the gathering fog.

Desperately the men toiled at their oars, urged on by the curses of the man at the steering-oar.

"That'll be Whisky West in the stern," mused the constable.

He half raised his carbine; then lowered it.

"Damned if I'll shoot a man in the back—even him!" he muttered as he wiped his bloody face.

Pierced below the water-line in several places, the water-logged boat stole slowly away. But on the edge of the fog-blanket the oars ceased to move, and the boat remained motionless.

Buck's ears caught faint sounds—sounds as of orders roared out in the distance.

A minute passed by, during which buckets of water splashed overboard from the leaking boat. And then from out the fog appeared the outlines of a smaller boat manned by two men. It drew near the whale-boat, and the east wind wafted ashore the murmur of voices.

The constable watched, curious to learn what Whisky West hoped to accomplish.

Then came the answer: a ragged volley from the boats, now gunwale to gunwale. Four rifles spat out their metal messengers. Three of the missiles whined harmlessly far overhead; the other left a white scar on the flat face of the boulder at a point less than a foot below Buck's right elbow.

"So that's the game, is it?" thought Buck.

He snapped up the leaf of his rear-sight, and elevated the slide to the 800-yard mark. He was aiming carefully at the bulkiest figure in the boats when came a voice from close beside him:

"Why didn't you let me in on this?"

Buck stared at the speaker. It was Napier, stretched flat upon the tundra, less than three yards distant. Pyjama-clad, pale and almost breathless, the

Maxwell \$850

Points to Consider

YOU, like many other people in your community, will soon be driving your first automobile or a new one to replace the old one. While every buyer must analyze for himself the features embodied in various cars, we simply want to present briefly a few Maxwell facts that may aid you in reaching a wise decision.

Comfort

The Maxwell is a comfortable riding car. There is plenty of room for five people; the cushions are soft and deep; the springs are long and flexible and they are made of the best spring steel, scientifically heat-treated, accurately suspended and balanced. You will always be comfortable in a Maxwell.

Appearance

The Maxwell is a trim, smart, good-looking car. While it is, of course, smaller than the heavy high-priced cars, its finish, its lines, its body, its general design is almost identical with cars costing two to three times as much.

Service

The Maxwell car, being a product of thirteen years evolution, is so designed and manufactured that it gives unfailing, consistent and satisfying service to thousands of owners. Maxwell cars are made of the best materials that money and brains can buy—and they are made right. Moreover, they are equipped with every device

for comfort and convenience. They are complete in every respect.

Low First-Cost

You can get everything in a Maxwell that you can get in any car and you get it for less money. The reason for this is that the Maxwell is a light car and it is built in enormous quantities. The Maxwell Motor Co. is one of the three largest producers of high grade motor cars in the world.

Low After-Cost

The Maxwell will give you more miles per dollar than any car built. We say this without hesitation or doubt. It is our honest belief and we are willing to prove it by various Maxwell World Records, by Maxwell owners, by comparison with any other car or by any other way you suggest or prefer.

If this statement of facts induces you to visit our dealer and arrange for a demonstration, we will be confident of the outcome. The Maxwell will please you. We know it will.

Every Shovelful Counts

THERE'S satisfaction in having a Sunshine Furnace. You know that the coal you put in the big wide door will be turned into heat for the house.

What makes the Sunshine a coal saver? Two things:

1 THE STUDY—the science you might call it—that has gone into its design.

The air passages are wide, the radiating surface is large. The heat from the flames is spent before the fumes get to the chimney. This means more heat through the hot air registers.

The fire-pot, which is the main source of heat, is always kept clear of ashes that would prevent rapid conduct of heat from the burning coal to the radiating surface of the fire-pot.

2 THE WORKMANSHIP that produces a permanent "heat-tight" job.

The doors and dampers fit closely. When you shut off the Sunshine Furnace, the heat is held without burning up coal; and tight construction at every point directs the heat to the warm air flues and avoids the waste of coal.

Would it be wise to look for fuel-economy in any but a modern, dependable furnace like

McClary's Sunshine Furnace

When you are planning a heating system for your home, wouldn't you like to know what McClary's Sunshine will cost you, installed? Well then, our Heating Engineer will be glad to give you this information. He will show you how to plan your heat distribution so as to get the most out of it. No, there is no charge. Simply write to him fully at the factory. Meanwhile, mail the coupon for our booklet "Sunshine."

NAME _____

ADDRESS _____

sick man had managed to creep out from the barrack and secure his carbine.

Buck opened his mouth to swear. He did swear; but the staccato roar of Napier's weapon drowned his words. The invalid was using "magazine fire."

Another salvo came from the distant boats, and angry hornets seemed to be winging their way past the ears of the two men on the knoll.

Walsh turned back to his work. He realized that in order to compel Napier to leave he would have to be carried bodily from the firing line. Covering once more the bulkiest form visible, Buck emptied his carbine.

A wisp of haze veiled the result of the shots. A brief silence ensued. Walsh turned to look at his comrade.

Napier was refilling his magazine. He caught the glance of the other and grinned up at him.

"I think," said he, "that it's Section 235 of 'The Book' that reads: 'Objects dimly seen at evening, and in misty weather, appear more distant and larger than in reality.'"

Napier paused for breath; then he lowered the slide of his back-sight, and concluded: "We're shooting a little over."

"And there's another section in the Red Book that has to do with instant obedience to a command!" Buck roared back. "I order you into the hut!"

"Then you'll have to shove me in the 'Skookum House,'" was the sarcastic rejoinder. "It won't be the first—"

The vicious zip of a low-flying bullet cut short Napier's remarks. His breech-bolt snapped shut. His forefinger slipped within the trigger-guard. Then he coolly began firing again.

"Damn the fog!" muttered Buck as the vapor enveloped the two boats.

The rifle-fire from seaward died away. The boats melted from view. Buck drove two more bullets into the fog-zone, and then stood up. Napier, too, was trying to get up on his feet; but his movements were feeble and uncertain.

"We were—were—right to cease firing," he said as Buck grasped him at the armpits.

A quizzical expression swept over his haggard, unshaven face as he added: "Section 146, paragraph 4, says:

"Expenditure of ammunition should, as a rule, be—pro-proportionate to—"

An additional strain on Buck's arms told him why the junior constable had not finished the quotation. Napier had fainted.

The maniacal cry of a loon came up from the fog-shrouded waters below. The wind ceased. And now a mist arose from the Barrens, and crept out to join the sea-fog. A mosquito, attracted possibly by the presence of blood, lit upon the constable's temple and gorged its fill.

With an inarticulate oath Walsh paused to crushed the stinging insect. Then he gathered his comrade in his arms and strode toward the barrack, already indistinct in the gathering mist.

CHAPTER IV.

The Trail to Lame Dog Lake

Napier rallied from his stupor to find Oolah and Buck bending over him.

"How many did we bowl over," he asked.

Buck shook his head. "I'm not going to scold now, lad," he said. "But you had no business leaving your bed," he added.

The junior constable sipped his broth and eyed the roasted duck which Oolah had taken from the over. The barrack was fragrant with the appetizing odor of the cooked fowl.

"I'd surely like to have a bit of that," said Napier. He waved a spoon toward the table where all was ready for Walsh.

"Damned if I don't believe you're getting better!" pronounced Buck.

He took the empty bowl and spoon from his comrade, pressed him gently back upon his pillow, and then looked after his own supper.

Outside the hut one could scarcely see a hundred yards. And as evening drew near, Oolah's skin tupek could no longer be seen from the doorway of the barrack. It promised to be a thick night indeed.

THE HOLLIS RURAL CREDIT BILL

When Rural Credit is receiving so much attention from thinking farmers thruout the West, the comment which follows from The Farmer, St. Paul, for June 3, on the "Hollis Rural Credit Bill" just passing thru the U.S. Congress, which has been designed to meet the demand for farm loans in the States, will be interesting.

It has been freely predicted for a year or more that Congress must eventually do something to satisfy the public clamor for better credit facilities for the farmer. Rural credit, in all its varied and complicated phases, has perhaps received more attention during the past few years than any other public question. This public agitation has apparently convinced Congress that the time is ripe for action, and in accordance therewith, after many months of profound study and research, the Hollis bill (S.F. 2986) is presented as the last word on the American rural credit question. The Hollis Bill has already passed the senate and is expected to pass the House, thus becoming law, after which time Congress can pass on to other great and pressing problems of the day.

After wrestling thru some seventy-eight pages of profound language, which constitutes the Hollis bill, we can only conclude that until Congress can draw up a simple, business-like bill, understandable by the layman, it will do well to saw wood on more important legislation and allow the rural credit question to simmer along until we all know more about it. So far as we can see, the Hollis bill is merely a sop to public opinion and will scarcely help the man who really needs better rural credit facilities. Let us see what the average reader can dig out of this wordy document known as S.F. 2986.

Federal Farm Loan Board

First, there shall be created a Federal Farm Loan Board, the membership to consist of the secretary of the treasury and four members to be appointed by the President. These board members are to be scattered among the different political parties, are to be not connected with any banking institution, and shall receive \$7,500 a year salary. This Farm Loan Board has very arbitrary control of all provisions of the act and is to serve as an educational institution as well, "disseminating in its discretion information for the further instruction of farmers regarding the methods and principles of co-operative credit and organization." The United States is to be divided by this Board into twelve land bank districts. In each district a Federal Land Bank, with not less than \$500,000 capital is to be created, to be managed by five directors appointed by the Federal Farm Loan Board. The capital stock of such banks is divided into \$5 shares which may be bought by anyone, including the state and government. If the public does not buy it the government is authorized to do so. So much for the elaborateness of the organization and the vastness in the number of new public offices created.

Making a Loan

To get down to making a loan: Ten or more farm land owners, or those about to become such owners, may form a national farm loan association. By making due affidavit about the nature of the loan, and by subscribing five per cent. of the loan in stock, this association can then make application for a loan not to exceed \$20,000 for the ten members. The loan can be used for the following purposes and no other: first, to provide for the purchase of a farm home; second, to provide for the purchase of equipment; third, to provide buildings and improvement; fourth, to liquidate indebtedness incurred for the purposes mentioned above. The loan may run from five to thirty-six years, to be repaid on the amortization plan at rates to be determined. Farm loan associations may be organized either under the plan of limited or unlimited liability. Over the whole complex organization the Farm Loan Board has almost absolute sway. The plan is financed through the authority to issue bonds covering such loans. We confess to a lack of ability when it comes to adequately describing all the ins and

Livestock News

EXPORTS OF PURE BREDS

The North British Agriculturist (Scot-
land) has the following paragraph, which
will be interesting to cattle breeders. This
shows British exports of pure bred cattle
for the month of April:

"The number of pure bred cattle export-
ed during the month of April was the
largest since 1910, and the average of de-
clared value the highest on record for
April since 1895. The following is a com-
parative table for the past three years:

Period.	Number	Declared	Value.	Average.
April, 1914 ..	219	£17,080	\$ 77 19	9
April, 1915 ..	88	9,363	106 7	1
April, 1916 ..	357	43,938	123 4	0

"The largest customer during the month
was Argentina, to which country 253 head
were sent at \$139 14s. each. In the same
month of 1915, 52 head were dispatched to
that country at \$132 13s. 10d., and in
April, 1914, 61 head were sent at \$111
9s. 6d. Uruguay last month secured 26
head at \$115 15s. 6d. In April, 1915, 13
head were sent to that country at \$80 each,
and in the previous year, for the same
month, 66 head went at \$96 4s. 3d. In
April, 1915, Australia imported six head
at \$133 6s. 8d.; last month seven head were
sent there at \$61 8s. 6d. The remainder
of last month's exports went to countries
not separately enumerated. These totalled
71, and realized an average of \$72 11s. 5d.
The shipments made to these countries in
April, 1915, numbered 17, at \$36 12s. 11d.,
and in April, 1914, 92, at \$42 14s. 4d.

BIG HORSE SALE

On Wednesday, July 5, 1916, at 12
o'clock, that is, the last day of the Calgary
Exhibition, 500 head of horses will be sold
by auction at the Alberta Stockyards, Cal-
gary. Four hundred head of these will be
sold in carload lots. They comprise 175
head of two-year olds, 175 head of three-
year olds and 150 head of four-year olds.
Seventy-five per cent. of each of these
ages are mares. They are all by imported
registered stallions—Clydes, Shires, Per-
cherons and Suffolk Punches. The dams
weigh 1,200 to 1,500 pounds. All will be
sold without reserve. The terms are cash
and buyers from outside points must have
bank references. A. Layzell, Calgary, is
the auctioneer.

LACOMBE BULL SALE

The most successful bull sale on record
was held in Lacombe on May 31, under
the auspices of the Alberta Cattle Breeders'
Association and the Dominion and Provin-
cial Departments of Agriculture. One
hundred and fourteen animals were sold,
the average price being \$164.60 per head.
Of the sales made 13 Herefords brought
\$216.15 per head, 85 Shorthorns \$158.64
per head, 16 Angus \$154.37 per head. The
total price was \$18,775. Together with
the sale in Calgary the total selling prices
was over \$90,000.

The prize winners were as follows:—
Herefords, Thomas Brand & Son, Red Wil-
low; reserve champion, S. H. Taylor, La-
combe. Shorthorns: champion, R. A. Swit-
zer, Lacombe; reserve champion, N. W.
Robinson, Innisfail. Angus: champion, A.
E. Noad, Olds; reserve, C. R. Abbott, La-
combe.

STOCK JUDGING CONTEST

The students of the three Alberta Pro-
vincial Schools of Agriculture will each be
represented by a team of three boys at
Calgary Fair, to take part in a stock judg-
ing competition. A. E. Meyer, of Edmon-
ton, is offering a cup for competition
among the schools in the judging of the
standard classes of livestock. The cup
is kept if it is won two years in succession
by same school. On account of the oppor-
tunity afforded at the large fairs for ad-
judicating on large classes of superior
stock, the contests will be carried out at
the fairs. Calgary being chosen this year
and probably Edmonton next year. The
Calgary Exhibition Association is contribut-
ing cash prizes in the same competition.

GREAT SHORTHORN SALE

On June 1 C. A. Saunders and Sons, of
Manilla, Iowa, sold forty-nine Shorthorns
at the grand average of \$1,068. This is
the highest Shorthorn average recorded
since the famous New York Mills sale in
the early 'seventies. Thirteen bulls aver-
aged \$994 and thirty-six females \$1,094.
The herd was largely made up of the great
tribe of Cumberlands and the buyers were
drawn from all over the United States as
well as from the Argentine. The highest
priced animal of the sale, "Gipsy Cumber-
land the Third" went to the Argentine at
\$3,030. Eleven daughters of the famous
"Cumberland's Type," consisting entirely
of yearlings with one heifer calf and five
bull calves brought \$18,250, an average of
\$1,140. It was a sale that not only the
owners but all Shorthorn breeders may
well feel proud of.

SALE AT EDGERTON

On Tuesday, July 6, a sale of 150 head
of valuable farm stock and fat cattle will
be held at Edgerton, Alta. commencing at
9.30 a.m. The stock is the property of
W. R. Minnick, and the farm is located one
mile east of Edgerton, Alta. The stock in-
cludes imported Clydesdale stallions, mares,
Canadian-bred stallions and mares, pure-
bred Shorthorn cattle as well as a number
of grade mares and high grade cattle.
Catalogs can be obtained from either the
auctioneer, H. F. Woodry, Saskatoon, Sask.,
or the owner.

"Hogs is Hogs"

"—and pigs is pigs." It matters not what breed they are, pure bred hogs for breeding stock
are in demand just now. And there's good enough reason. Look at hog prices! Packers
have lately been offering ten cents per pound live weight for choice hogs fed and watered.
Farmers who have hogs to market are turning them off at a handsome profit. Such prices
on pork mean a boom in breeding stock. If you have breeding stock for sale get in now while
the going is good.

Just watch the swine column on this page during the next few weeks. This column is growing
because The Guide classified advertisements bring results. The majority of those advertising
now have found from experience that it pays to use The Guide. That's why the same breeders
names appear on this page year after year.

Last week we published a letter relating the experience of Mr. Isaac, Aberdeen, Sask., who
advertised his Berkshires in The Guide. P. J. Jorgensen, Pambrum, Sask., who has Poland
China hogs, writes us under recent date as follows: "I must say I am well satisfied with the
results obtained. I think The Guide is the best farm paper I ever read. Wishing you every
success."

The Guide's "Farmers' Market Place" is planned so as to co-operate with the readers in
affording them an economical opening to wider markets. A glance at this page will show the
many departments into which it is divided. This affords the prospective buyer a quick method
of referring to the section in which he will find offerings in the line he intends to buy. Naturally
he will look over all the advertisements in that particular section before making his choice.
This means that every advertisement will be read by every prospective buyer. This is the
strong advantage of this classified section.

Advertising rates are given at the top of this page. Send in your order now accompanied by
the amount for the number of times you wish your ad. to run, and let The Guide demonstrate
to you, as it has to hundreds of other farmers, how it can sell.

The Grain Growers' Guide - Winnipeg

Combination Threshing Outfits

Continued from Page 7

to provide granary room for it all at once, which was a big item. With the small outfit you can keep hauling out as fast as you like.—G. M. PHELPS.

Advantages and Disadvantages

I purchased last fall for my own use a 28-in. separator and 8 h.p. engine with trucks. The separator is hand fed and has straw carriers, but has grain spout, which will put grain in wagon box or granary. The engine is fully large enough for this separator. Last season was bad for threshing, the straw was always tough and a lot of straw in proportion to grain. The outfit was new to us and so we did not get the best out of it. We threshed an average of 400 bushels of wheat and 900 bushels of oats per day, using two stook teams, one pitcher in the field, a feeder, and man to look after the straw.

The straw carriers bothered us most as the slats kept continually coming off the belts. This was partly due to the carriers not being quite level. We tried rivetting the slats to the belt, but even these occasionally cut thru the belt. Counting cost of gasoline and wages for three extra men my threshing last fall cost me from 2½c. to 3c. all round, not counting anything for interest or depreciation. I use the machine only for my own threshing, my main object in purchasing was to avoid getting in more weeds which cannot be avoided when employing a large custom outfit, and also that the men on the farm could get on with the fall work without having to go to all the neighbors to pay back work.

Can Get Clean Grain

Compared with the larger outfits the work is naturally slower, but greater care can be given to have grain well cleaned and also less grain will be lost in the straw. This was watched very closely last fall, and with the machine I never found at any time any loose grain going over with the straw.

The advantages, in my opinion, as compared with the larger outfits are:—1. Weed control, that is by threshing only on one's own farm no new varieties of weeds need be introduced. 2. Work can be commenced whenever grain is ready and fall plowing done even when only part of grain is threshed should weather turn wet. 3. At a pinch work can be done even with only three men, but of course not at full capacity. With about five men (two teams, feeder, pitcher and straw man), the machine can be kept running full in any ordinary crop, provided the haul is not too far. Threshing about 500 to 600 bushels of wheat at a setting would appear better than trying to do more, on account of handling straw and a further haul for the stook teams when threshing more than this without moving. When threshing into wagon boxes the machine can be moved at every 100 bushels or so, and very little difficulty with straw need be experienced. 4. The annual threshing bill will, in a year or so, depending on the amount threshed, soon pay for a small machine. 5. The engine can be used all year for small jobs, such as crushing grain, etc.; we use ours without dismounting it, having the crusher and machine in the same shed. 6. Very little time is lost moving from one setting to another and getting started again.

Disadvantages are as follows:—1. Labor. It will generally be difficult to get extra men to hire on for only ten days or two weeks' threshing, while the larger outfits can give from six to eight weeks continuous work. 2. Longer time actually threshing. If a farmer can rely on getting a big machine every season just when he wants it, he probably would not need a small outfit. 3. Some extra expense will be entailed in buildings, as it would not be economy to leave the outfit exposed. The life of the machine would be very short I imagine under such treatment. 4. There is, of course, the objection to handling straw and hand feeding. More expensive outfits have blower and feeder; but, in my opinion, the extra cost is out of all proportion to the advantages of these attachments provided the two

Seek Power, Economy, Simplicity

It is a well-known fact that the yearly sales of Case threshing outfits exceeds that of the next three concerns combined. Surely this overwhelming evidence of Case leadership proves to you that this popularity is the result of actual performance.

Details Unnecessary

When any machine earns practically universal popularity, this very popularity is proof of merit.

In the threshing field, Case has won first place because we have been specializing in threshing and power machinery since 1842. Our experience—our efficient industrial organization—our resources—mean for you a maximum of value for money expended.

Which—Steam, Kerosene or Gasoline?

Case engines of the three types lead simply because they have proved by actual work that they are all we claim for them. The farmers themselves

The Sign of
Mechanical
Excellence
the World Over

have furnished this evidence—they know.

In the steam class, Case engines for years have been acknowledged the simplest, the most powerful, and therefore the most economical. Take our most recent advance—improvements in boiler construction. This proves that we still believe in steam power as well as in gas.

Case steam engines meet the boiler laws of all states and provinces. For steady power for threshing they are without equals.

Or if you want a gas tractor with your threshing machine, Case builds four sizes, 10-20, 12-25, 20-40 and 30-60.

If you are figuring on buying an outfit, buy Case. Better be safe than sorry. If you are having your work done, be sure that the thresherman has a Case outfit. You will be money ahead. Our catalog tells why. Want a copy?

DUNLOP TIRES
SEAL OF QUALITY
AUTOMOBILE

"I Consider Dunlop the Leader Because who Comes First, Ordinarily Knows the Most, Gives the Greatest."
—Handy Andy.

No matter what other tire makers may do for the betterment of their product, a close examination generally reveals the fact that we have been offering similar, or greater, virtues in our product for a long time previous. This is simply because we are the pioneers of the industry in Canada. If anybody should know tire-making from A to Z we should.

We have been manufacturing tires in Canada for nearly a quarter of a century. No other tire company has been making tires in Canada for half that length of time.

"Traction" and "Special" are in the forefront to-day, because Dunlop has always led the way in tire betterments.

WHAT THE FARMER CAN DO WITH CONCRETE

It contains information that has saved them time and money in making farm improvements. It has taught them the economy of building everything of everlasting concrete.

There's no other building material as durable, as adaptable, as easy to use or as low in final cost as concrete.

Practically everything that can be built of wood, stone or steel can be made better with concrete and this book tells you how to do it. It is fully illustrated with photos and diagrams and contains 52 practical farm plans.

If you haven't a copy, send for one today. Keep it handy. Refer to it often.

It is free and will be mailed to you immediately upon receipt of coupon below.

NORMAN ROSS.
Indian Head, Sask.

IN A BRUSH COUNTRY

My separator has a 24-inch cylinder and 29-inch rear with bagger, but no straw carrier or blower. The power is supplied by a six h.p. gasoline engine, mounted on a half truck heavy wagon. The separator is also on its own trucks. I like this better than a combined outfit, because we thresh practically all the grain raised in nine townships and the roads are very bad in this brush and timbered part of the country. The engine and parts of the separator make a ton load for a team of oxen, and the separator weighs about fourteen or fifteen hundred. We use two teams of oxen, as we find them ideal for this work, as they go thru mud and rough roads much easier than horses and give less bother in several ways than horses. The machine is hand fed. In this locality we have lots of straw not fully ripened and as most of the settlers need all the straw for feed they cut it very close to the ground, which ties up most of the weeds and grass and makes very tough threshing for small power, especially during a wet fall like 1915. Thus what information I give here from my books for the last five years would not be what the machine could do on the prairie where the stubble is cut high and the straw ripe and clean. It requires three teams to thresh 20 acres in one setting, each man pitching his own load, three men on the straw and one team and man to haul grain, a feeder and one man to tend engine, separator and bag the grain—in threshing oats it needs a man to tend bags alone, and eight men to stack thresh. The capacity of the machine is 25 to 35 bushels of wheat and 50 to 80 bushels of oats per hour. According to the makers our engine to develop six-horse power should run 425 revolutions per minute, but to run the separator properly it only runs about 350 r.p.m. At this speed it gives sufficient power except in tough grain. Of course I could overcome that by logging the separator pulley. With a straw carrier, a tailing elevator and high bagger I would advise an eight-horse power engine, as it will not use as much gasoline as an overworked small engine, and will not give nearly so much trouble.

My terms for threshing are \$1.15 per hour, including 15 minutes for unhitching and setting up and 15 minutes for taking down to move away, the farmer furnishing all the men but myself and a feeder.

We have threshed in good oats 110 bushels an hour, but 820 bushels is one of our biggest ten-hour days and about 70 bushels of wheat an hour is the most we have made. I may say we have never lost five minutes in the five years we have threshed.

Points to Be Considered

A farmer's first consideration will always be to save all his grain with the least possible expense. The help required to keep a small outfit running to its capacity will depend largely on the size of the machinery. This can be easily judged once the proper size is decided on. It may be presumed that a small outfit can be expected to thresh from 600 to 1,000 bushels of wheat per day, other grains in proportionate quantities.

It will remain an open question as to whether an outfit with less capacity would be a financially good investment for the average farmer. Doubtless numerous farmers will remember the horse-power machinery of days gone by. How one man compared with another could feed more grain to a machine and use considerably less power. A small individual farmer's outfit will be successful or not to a large extent according to the methods of the hand-feeder himself. The secret of successful hand feeding is the proper spreading and tossing of the sheaf. This has a great deal to do with the power necessary to operate a separator successfully. No matter how the machinery may be equipped otherwise, it is for the individual farmer to decide as to the most profitable method or process to employ for the saving of his crop. Will a small outfit of his own result

Many Improvements. Order Early—Most Important

My price for cash this year is the same as last and my time price is only 2 per cent. more. Other companies have advanced from 10 per cent. to 25 per cent. You will notice I publish all my prices plainly in my advertising and my catalogue and do not have two or three different prices for the same article.

You need a New DE LAVAL SEPARATOR NOW

1st If you are still using some gravity or settling process of creaming—

BECAUSE YOUR WASTE IS greatest and quality of product poorest in mid-summer when the milk supply is heaviest.

BECAUSE TIME IS OF GREAT value on the farm at this season and the time and labor saving of the good separator counts for most.

2nd If you have a very old De Laval or an inferior separator of any kind—

BECAUSE THE LOSSES OF the poor separator from incomplete skimming and the tainted product of the hard-to-clean and insanitary separator are greatest at this season.

BECAUSE OF THE GREAT economy of time at this season in having a separator of ample capacity to do the work so much more quickly.

BECAUSE AN IMPROVED DE Laval is so much simpler and

BECAUSE THE SKIM-MILK IS poorest without a separator in hot weather and often more harmful than helpful to calves.

BECAUSE THE WORK OF AN improved De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

more easily handled and cared for than any other, and you cannot afford to waste time these busy days "fussing" with a machine that ought to have been thrown on the junk-pile long ago.

BECAUSE THE DE LAVAL Separator of to-day is just as superior to other separators as the best of other separators to gravity setting, and every feature of De Laval superiority counts for most during the hot summer months.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency simply write the nearest main office, as below.

Automobile Owners!

Here is one of the Handiest Tools ever invented

L. & L. HANDY TIRE TOOL

There is one job every automobile owner hates and that is to take his tires off. Here is a tool which will perform this operation in less than two minutes. Experienced men do it in one minute. The L. & L. tire tool will not only take your tires off, but will put them back again in every case where the manufacturer uses split demountable rims. Why not do this work yourself and save money and time?

Every Farmer Needs One

An automobile has become one of the principal factors in the farmers' business. You don't want to haul your car miles to the garage any more. Neither do you want to experience again the old back breaking job when time compels you to do the job yourself. The modest sum of \$3.00 will relieve you from all expense and worry.

It Takes the Place of Five Ordinary Rim Tools

Its quick service in handling any number of punctures on the road will prove it to be the best asset of your tool box. The "L. & L." handy tire tool requires no attachments for operating the various kinds of rims, since it handles either clincher or straight side rims of any kind and all sizes, by the instantaneous adjustment of a sliding notched bar. No bolts, nuts, pins or other attachments to become loose or get out of order. Easily operated by man, woman or child.

The stiffest rim or "frozen tire" is a mere trifle to this speedy and handy tool. Further particulars will be gladly furnished free on request. Price \$3.00 f.o.b. Winnipeg. Send your order today and join thousands of satisfied and enthusiastic owners.

Auto Tongue Truck on Deering and McCormick Binders

SELF-STEERING FEATURE

The binder is purposely thrown out of square in this illustration in order to show clearly the steering action of the tongue truck wheels.

When the outer end of a binder platform starts to hang back, it pulls the tongue truck toward the grain.

Any movement of this tongue truck toward the grain turns the truck wheels in the opposite direction and at so great an angle that they automatically steer the binder back to its proper square cutting position, with the horses moving steadily straight ahead.

The binder cuts a full 8-foot swath with less work for both driver and horses.

For A Sure Harvest

If your Deering or McCormick binder is in good condition when it goes into the field the chances are all in favor of its finishing the job without trouble. Should you have an accident, both repairs and extra help are within calling distance. The farmer who uses a Deering or McCormick binder is safe as can be. He can depend upon it to harvest his crop with the least possible work and trouble.

There are some Deering and McCormick features it will pay you to know about even if you do not need a binder this season. You will want to see the new auto tongue truck that shortens the work by hours and eases the strain on horses and driver. The wide, deep-lugged steel main wheel with its 10-inch face; the strong, well-braced reel with its outside reel support; the equalizer that keeps the canvases running true; the three handy levers for tightening and loosening the canvases; are all important features because they help in the work of harvesting your grain.

Visit the local agent soon and see these machines. It will pay you. Would you like to read about them in the quiet of your home—then drop us a line at the nearest branch house.

Who's Your Dentist?

Does painless dentistry appeal to you, dear reader. If it does, look me up. Ask any business man in Winnipeg whether or not I am reliable. I could not do dental work for so many of Winnipeg's business and professional men and their families unless I did my dental work with less pain and better than they could get elsewhere. When I first came to Winnipeg dentistry was a luxury on account of the high price. I made possible specialized dental work at moderate prices—and think, the big consideration is

IT IS GUARANTEED

Nowhere in Western Canada can you get the service and kind treatment that you get here.

GOLDEN STAR FRUIT & PRODUCE CO. - WINNIPEG, MAN.

in a dividend paying investment, allowing him to thresh when he is ready and as long as he pleases, or is he ahead of the game by employing the thrasher who makes it his business to come and go without a murmur, doing the work in first-class shape and in the shortest time possible, thereby allowing the farmer to devote his time to fall-tilling of the soil instead of, perhaps (one never can tell), requiring the greater part of the late fall season to take care of his crop?

ALBERTA FARMER.

SATISFACTION IN ALBERTA

J. W. Farley, my brother-in-law, and myself bought a small thrasher last fall and a 10½ h.p. engine. We cannot speak too well of it. We had some trouble, (1) first no power in our engine, (2) then of sieves loading, (3) then straw would bridge over blower, and we had to use fork. No. 1 we overcame by getting book of instruction from the manufacturers and following it. No. 2 we mastered by making a new chaffer or sieve and increasing the speed on the fans to more than double. No. 3 we fixed fairly well by taking off four inches of straw deck and bridging the corner in blower above fan with sheet iron. But once in a while we are bothered still by straw bridging over in blower spout. I feel that the small outfit is the only rig. I kept strict account of costs and will furnish you them. If you compare what we threshed by current prices for threshing in this district 11c. and 8c. you will see where we get off at.

Some Mistakes

We made mistakes: one was we only had one man each whereas we should have had two each and put the second man on the plow and not had five or six horses laying off. Also we might have had him hauling grain to make room and not build new bins which we threshed into.

I honestly believe by comparing crops of my neighbors that they had equal with ours, but we threshed quite seven bushels per acre more and in some we even beat that I think.

Our mill is not perfect, but none can beat it as yet. It does not need a big crew, it is very low in price, and it is well made in every detail, and will do the work that the manufacturers claim for it. It will do more with the few little changes we made done by the firm themselves.

Cost Last Season

Engine \$315, draft charges 80c., freight \$31.10	\$346.90
Separator, \$606.35, interest \$5 first note, interest on second note \$10.95	622.30
Sundries — Lumber for rack, belt-dressing, forks, shovels..	23.50
Wages and meals, A. P. Rose..	357.20
Wages and meals, J. W. Farley	459.82
Gas used by Rose	45.00
Gas used by Farley	58.76

\$1,913.48

The above includes every known cost for outfit, horses, men, keep and wages, also for our two selves. The grain threshed for Farley took 23½ days. The amount was 5,800 bushels wheat, oats 200 bushels. We lost time in starting, both of us being "green" at running either engine or separator, but both were used to working in lumber. The grain threshed for Rose took 18 days, 5,415 bushels wheat, oats 2,400 bushels. Freight charges on separator are included in the \$606.35; freight was \$144.

A. P. ROSE,
Sundial, Alta.

PATRIOTIC SALE

A Patriotic sale in aid of the returned soldiers of the Austin district, under the auspices of Admiral Wemyss Chapter I.O.D.E. and the Home Economic Society, was held in Austin on Friday, June 9, when the sum of \$510 was realized.

There is little fear of cholera if pigs are kept clean, fed clean food and protected from infected animals.

Save the breeding pigs from the sows that have large litters. Do not send a pig to market until he is fit. A hog must be grain fed to make good meat.

Farm Women's Clubs

NOTE.—Any woman in Saskatchewan who feels that she would like to have a Woman's Section of the Grain Growers' Association in her district, should communicate with the provincial secretary, Miss Erma Stocking, Delta, Sask.
 Any Alberta woman who would like a Woman's Section of the United Farmers in her district should write to Mrs. E. M. Barrett, Mirror, Alta., who is the women's provincial secretary for Alberta.

STUDYING RURAL CITIZENSHIP

Dear Mrs. Barrett:—A women's section of the United Farmers of Alberta has recently been organized here. We have a membership of six, and several more expect to join us at the June meeting, which will be held at the home of our president, Mrs. Thos. Lineham. Our vice-president is Mrs. Thos. Blackburn. We meet on the third Wednesday of every month. The subject for discussion at the next meeting is "Hints on How to Lessen Housework," and in the meantime we are sending for literature on "Studies in Rural Citizenship."

As I am a subscriber of The Grain Growers' Guide I would be pleased to see our report in print.—Yours respectfully,

(MRS.) RAY LAUGHREY,
 Sec.-Treas.

NEW DILKE ASSOCIATION

A new association has come into existence at Dilke. Mrs. Osbourne, their president, writes that they were organized with the help of Mrs. Shepherd, one of the provincial directors. Her address proved of deep interest and the members were happy to have the opportunity of hearing her. Ten women joined the women's section of the Dilke Local, and have planned to meet twice a month.

PICNIC AND TAG-DAY

A picnic and tag-day is the happy combination thought of by the Chatham W.G.G.A. for the purpose of raising funds in aid of the Red Cross Society.

The June meeting of the club was at the home of Mrs. Templeton. Two good papers were given, one by a nurse on "Health and Nursing," the other by a member interested in poultry raising, who spoke on that topic. A delightful lunch was served by the hostess and her daughter, each member giving ten cents to help fill the treasury.

LABOR SAVING

(Paper read before Keeler W.G.G.A., June 1, 1916.)

When I was asked to write a paper for this association, I did not know exactly how to take it—seriously or as a joke. I decided, however, to take it seriously and let you take it as a joke.

The world may or may not be growing better, but people are certainly growing more sensible, I am sure, and everything points toward "labor saving." The well-to-do, with plenty of competent help, are as keen to save labor as we here, who are handicapped by no help or very indifferent help, to put it very mildly. I visited at a place this winter where help was plenty and they served paper napkins with the fruit for breakfast. It not only saved washing but kept napkins free from fruit stains; one of the things, as you know, that we housekeepers have to contend with.

The Dumb Waiter

The greatest labor saver I have is the dumb waiter. It saves no end of steps. Then the spring and pulley on my trap door leading to the cellar is another back saver. It is really a weight and pulley so that the door is almost on a balance; it lifts with ease and remains in any position without propping up. Then, of course, we all know the labor saved by the vacuum sweeper and the dustless dust cloth. Any dust cloth can be made dustless by wetting the cloth in water, then oil, then dry in the open air. If one would plan their kitchen with saving steps in view they would have salt, pepper, tea, coffee, etc., etc., at hand with no great effort to reach them; cooking utensils the same. I have on my kitchen table two empty coffee cans; one for cooking spoons and one for knives; no effort to drop them in when drying, and right there for use the next time.

Another time-saver is when making pie crust. Mix flour, lard and salt enough for several pies and keep in a

cool place. To make a pie on short notice in this way isn't the dread it would be if one had to start at the very foundation. I would not like to keep house without my bread mixer. I always stir cookies up overnight; keep the dough in a cool place. I stir them up when getting supper, then in the morning work into cookies. In this way there is not so much danger of getting in too much flour. When I have anything to heat in the shape of biscuits, rolls or doughnuts I put them in a paper bag in the oven and they do not crust over.

Do Not Dry Dishes

I took a short course of domestic science in Iowa two years ago, and since I have not dried my dishes; only when I have company that insists on drying them. I scald in very hot water and drain on a cloth in a pan. It is certainly hygienic, as I use very hot water, and saves many arm aching moves. I visited at a home where they had a "Maid's Chariot," a board with castors, cushioned and long enough to hold soap and brush. I haven't had one made yet, but think I will. It looked very easy for the knees when scrubbing.

Whenever I buy anything for the house or for personal wear I think "ironing" and avoid things hard to iron. I wear everything crepe that I possibly can and use small bath towels for the hands and every day use. I only iron the absolute necessities and use a gasoline iron which saves fuel and enables one to keep cool while ironing. The men in this country have every device possible in the way of machinery and labor savers. Why not the women? It certainly is a mechanical age. We all have the washing machine, and a fortunate few small gas engines to operate them. I haven't one yet, but think them fine, and every large family with big washings should have one. They will prolong the lives of the women and save backs for a better cause.

There are two things I have not found easy ways to do. One is cleaning the range and blacking it, and the other is scrubbing the floor. If one could only stand the floor up side ways, it would greatly improve the situation. Probably the "maid's chariot" referred to above is the next best solution. In doing all of my work and in stooping over especially, I try to use my physical culture training and stoop easily, making as the children say a "game" of it.

Train Every Girl

It is easier for some to keep house than others, but to be trained for it makes it much easier for all, and every girl should have a very thorough training. Business men require trained help. Farmers want only experienced help, which means or should mean the same thing. It is hard to imagine any business or profession where the difference in results between the efforts of the trained and competent worker and those of the untrained and inefficient are any greater than in housekeeping and cooking. Upon properly cooked food and properly balanced meals, together with systematic direction of effort, hangs the whole health and happiness of the home. I come from a long line of New England housekeepers, and was taught religiously in my youth to make rag carpets, soft soap, spin and knit. I have not had to use any of those great accomplishments for years until this winter, and then only to knit. It is now the fashion (and a good one) to do as little as possible, and do it the easy way. The old way, do all you can days and sit up nights to finish the task. I think people eat more sensibly than they used to. Less heavy food and more variety. In everything but clothes I think we have grown more sensible, and it certainly takes less cloth for clothes now than of old.

The old maxim, "Let your head save your legs" is as sound today as it ever was.

FRANCES M. RICHARDSON.

By DIXIE PATTON

A HOLIDAY GAME

Ball-Chase will be found to be a good game to while away a tedious afternoon during the holiday season—if there is such a thing.

A row of caps is set along a wall or fence or a series of holes dug in the ground. At a distance of ten or twenty feet from these the players stand, and one selected as thrower throws a ball into one of the caps or holes. If he succeeds in his attempt the person whose cap is selected runs away as fast as he can and all the others after him. If they tag him he has to come back and take the place of the thrower, but if he gets back to his cap before they touch him he is free and the original thrower has to go on and throw the ball into another cap.

It is a good thing to play this game where there is room for considerable dodging around and behind obstacles of different kinds.

DIXIE PATTON.

WHAT I THINK OF WAR

I think war is a very bad thing, because the men go to fight and are shot in many places. They don't know when or where they are going to be shot. Some of them come back not able to do anything and some don't come back at all.

The women and children are treated very badly, too, and have no place to go for protection. In this great European war they have been treated worse than before.

I think it is almost as bad for the horses as it is for the men. They do not know what they are going for. The men can read the papers and imagine what it is like. Then if they want to, they can go and enlist.

In the wars all the big buildings are destroyed. Not only the big ones but all the huts and common houses as well. Some of the big ships are sunk and some are burned. The men and women cannot get enough food. Some people starve. The soldiers are taken to prison and do not get nice food.

The war lasts a long time and many places are destroyed.

OLIVE SPEER,
Springfield, Man.

Age 11.

WAR HAPPENINGS

When war is declared many people enlist. They then go away and train for a while. They are divided into battalions. When they become soldiers they go to the country where the fighting is going to be. Trenches have to be dug so the soldiers can hide in them, if it is a very wild battle. Sometimes the soldiers are in the trenches for a week at a time, having only a very little to eat each day. Sometimes they are very thirsty and cannot get a drink. If they are wounded they have to wait a long time in the battlefield before they are taken to the hospitals. Then if there are very many wounded coming in at once some of them have to suffer a long time because the nurses are so busy they haven't time to attend to all at once.

Then the sailors have to fight on the sea. Here they are in very great danger. Some of them have to go under the water in submarines to sink the enemy's ships. The others have to stay on board to destroy the enemy. They never know what minute their ship will sink and they themselves drown.

The people at home suffer a great deal. If the enemy burnt their property they are left without anything. Most of them die of starvation. If many people are shot at war a man comes and forces people to go. Some of them don't want to go, because they have to leave their friends. It isn't very nice to have people killing everything, but sometimes it can't be helped. People are always glad when war is over.

META L. DICKISON,
Antler, Sask.

Age 12 years.

WHAT I THINK OF WAR

War is fighting and bloodshed, and so should be avoided. It divides family ties and causes broken hearts. When a husband or father or brother joins the colors he is doing a good thing for coun-

try, but his family has to feel sorry all the while he is gone. When he comes back he is probably crippled and so is helpless.

In countries like Canada and Great Britain they have a very good system. They give help to the family left behind.

War causes men of one nation to hate the men of another, but it serves to bind in closer union the men of the same nation.

War means a killing or murdering of helpless women and children, a destruction of homes and property, and so I think it would be much better if we had peace on earth and goodwill toward all men.

VERA C. WENDT,
Edbery, Alta.

Age 13 years.

WAR IS A SET-BACK

I think war is like some large bird of prey, living at the cost of something else. I will give the following reasons for thinking so. War seems to ruin everything to a certain extent. When war is going on in a country, trenches and dug-outs are made all over the land.

The ground is also torn up by large shells. Now this brings the subsoil to the top, and thus renders the land absolutely useless for agricultural purposes. It will take many years to restore to this land the proper elements, so that grain and fruits may be grown on it.

In wartime a great number of the population are killed, and either very old men or very young boys are left. Thus many factories are shut down for want of men to run them.

Trade and commerce are also checked, as ships carrying goods are likely to be torpedoed by the enemy. Also in naval battles many ships are destroyed, thus weakening the navies.

When war is going on the people haven't much time to be given up to educational and religious matters, and many of the poorer people grow up uneducated.

Much money is needed to carry on a war, and to get this money heavy taxes have to be levied. Now, people who cannot pay these taxes are forced to become beggars, and some even become robbers. After a war there is mostly always a great debt to be paid, and until this is paid the country is unable to make further progress.

After a war there is a season of immigration, the immigrants are of all classes, and they mingle with the inhabitants of the country. War often makes us feel a growing hatred between us and the people whom we are fighting against.

For the reasons I have given I think war is a great disadvantage to a country. I think it is a set-back in every respect.

M. E. JOY YOUNG,
Carlyle, Sask.

Age 14 years.

MY OPINION OF WAR

I do not think that war is at all necessary unless for a good cause. Of course some countries make a great deal of money out of it, but it cannot be called good, as it causes so much loss of life and destruction. Men go to fight for their country and think it a splendid thing to give up their life for it, but it is not a proper thing to do unless they are fighting for a good cause.

Most of the wars that have been were thru envy or hate, and therefore should not have been, but in this war I think England is fighting for a good cause—Belgium's neutrality.

KATHLEEN SUTER,
Box 12, Juniata, Sask.

Age 12.

ABOUT WAR

I am a new member of this club, and I am going to write what I think about war. I think war is bad and there should not be any, because there are so many lives lost and crippled, and in some families there is starvation. This is what I think about war.

THE TWINE PROBLEM

Editor, Guide:—I must say that I am
pleased that Mr. Musselman has taken
up the twine proposition in the manner
that he has in his letter of May 10, as
it appears in The Guide, and I would
say that if there is any person inter-
ested who has not read it, they should
look it up. I would further say that we
are today sending out of our country
some seven or eight million dollars an-
nually to a foreign country, and we are
wholly dependent on a foreign country
for this most important necessity, just
about as necessary to our welfare as is
our bread, and we are wholly dependent
on difficulties that may arise in any
foreign country that no man can fore-
see. Surely we have abundance of evi-
dence of that fact of late.

There is just one point in Mr. Mussel-
man's letter where in my opinion he has
not been in possession of all the facts
in regard to flax twine. He is perfectly
correct in his statement that a million
dollars or more has been spent in trying
to produce a flax twine that would give
satisfaction, but to no avail. Mice,
crickets and grasshoppers raised Cain
with it, but not to any greater extent
than that of sisal or Manilla if it was
left in its natural state. Now the writer
made extensive investigations about
three years ago, and my information
was to this effect from the men who
spent much of the money referred to,
that they could not make a flax cord
that would pass thru the intricate knot-
ter that is in use on all binders, and in
order to help the cord pass thru the
knotter it was treated by an oil or
greasy process to make it more flexible,
and then it was learned the treatment
attracted mice, crickets and grass-
hoppers, and certainly played havoc
with the twine.

About this time The Grain Growers'
Grain Company secured an option on
what is called the Ware Metallic Clamp
Fastener, which can be placed on every
binder by removing the present knotter.
In the harvest of 1913 a thorough test
was made of this device in the field at
Headingley, and all the directors of the
company of that time were present, and
after spending a couple of days we came
to the conclusion that the fastener was
all that was claimed for it, but the fact
remained that we were not sure as to
the mice problem. Well, in 1913, I per-
sonally made arrangements with Mr.
Burgey, of Rosser, who was then secre-
tary of the Rosser Grain Growers' Asso-
ciation, and who is still filling the same
position, to have a dozen or more
sheaves bound with the flax twine and
also a number of sheaves bound with
manilla twine, placed in a safe enclosure
from livestock of any kind close to his
buildings. This was carried out to our
satisfaction, and in the following June,
when myself and several others exam-
ined the sheaves, we found that not one
band of the flax twine had been touched
by anything, but two of the manilla
sheaves had been cut by something, but
of course we do not know what did it.
We found mice nests in several of the
sheaves and winter roads thru the grass
in abundance surrounding those sheaves.

Then in 1914 we again made a field
test, and to our entire satisfaction, and
for the first time to my knowledge there
was a large number of crickets present
where we were working. There were
present Mr. Chipman, editor of The
Guide, and Mr. Acheson, of the C.P.R.,
and I drew their attention to the fact
that you could find the crickets on most-
ly everything in sight but we could not
find one on the sacks holding the flax
twine or the bundles of twine that was
exposed, and we watched the situation
for some moments, and we found that
they would avoid the flax twine. The
explanation is that the flax twine in the
manufacturing process went thru a
treatment of tar, and the same has
proved to be a complete success insofar
as our American friends are concerned.
The people on the American side con-
cerned in this clamp proposition made
much more extensive experiments in a
similar way, and found just the same
results, so we have made those tests and
are thoroughly satisfied that there is no
trouble from that standpoint. The im-
portant point is that we are not making
further progress along this line. Well,
we have been waiting on the American

Eighty-five thousand satisfied owners against unproved claims and rosy promises

You judge a man by what he's done—
not by what he says he intends to do.
Judge a motor car the same way.

Eighty-five thousand and more Cana-
dian built Fords have "made good" in
actual service. Since 1904 this sturdy,
economical car has stood the test—
not only in Canada, but throughout the
British possessions.

Every passing year has seen Canadian
Ford sales mount by thousands of cars
—because, under almost every con-
ceivable conditon, the car has proved
itself a splendid all-around utility.

It has sold on its record for dependable
and economical performance—not on
the rosy promises of its makers.

The man who selects a Ford is backed
in his judgment by more than eighty-
five thousand satisfied motorists in the
Empire.

Has this a significance for you?

"STAYPUT"

All-Steel Portable Granary

Capacity
1000
Bushels

Weight
1200
Pounds

DIAMETER: 13-ft. 8-in. WALL 8-ft. HIGH

The only upright portable granary built consisting of sixteen sections and a like number in the roof. It is easily erected. The only tool required is a wrench. We guarantee that one man can set it up in less than an hour. Very few bolts are required and these are placed in the angle iron frame (NOT ONE IN THE STEEL). The cupola on the top of the "Stayput" granary may be raised or lowered to get the necessary amount of air for ventilation.

FOURTEEN SPECIAL FEATURES

Portable—All steel fireproof—All steel frame—Reinforced interior construction—Reinforced roof—Interchangeable sections—Easily erected and taken down—Interlocking joints on interior—Flax tight—Exclusive bunker board system—Roof bolted solid—Bolted to platform—Cannot blow away—Lasts a lifetime.

Price only \$100 f.o.b. Winnipeg. We are manufacturing a limited number this year. Place your order early. The "Stayput" is built by a reliable firm you can depend on to render good service. Write for further particulars and circular "C" today.

parties interested to produce a twine at a reasonable cost, but there has been trouble in their organization, and as I understand it is at a standstill for some time, and I am unable to say what the next step will be or should be.

The twine that the experiments have been made with was manufactured from the ordinary threshed flax straw, which is badly cut up with the present method of threshing flax, and the twine is coarse and there is not sufficient length to the pound to effect any saving on the present prices.

Now to my mind there is just one step more to make in order to make flax twine a perfect success, and that is in the threshing, and I do not believe it is a difficult matter. It is all hinged in the getting of a machine that will separate the flax from the straw and not break the fibre, at least to a very limited extent, and I believe that a machine can be constructed on the principle of a continued set of rollers that will make the separation and not destroy the fibre. It is a contract for some able mechanic to construct such a machine.

Then comes the question, who is going to spend the money necessary to carry out the experiments that will be necessary to convince us whether it is possible or that it is a feasible proposition. I claim, and so will many others with me, that all that is necessary is to find a machine that will separate the flax from the straw without seriously destroying the straw, and I would suggest that the organized farmers of the West should make an appeal to the Dominion government to devote a certain amount of money to carry on tests similar to what I have outlined for the coming year. I am absolutely certain that we are sending up in smoke the material at our doors that will produce a cord that will tie all the crop in the Dominion of Canada at a lesser price than it is now costing us. Surely this important matter should get to the ears of our protectors in the Dominion house, and I have no doubt if properly placed before them good results will follow.

I have much more to say on this matter, but this letter is already too lengthy.
JOHN KENNEDY.
Winnipeg.

THE ROSS RIFLE

The Ross Rifle is again on trial. It has not only been on active service and shot at the Huns, but it has been shot at by parliamentary speakers and committees for so long that its merits and demerits threaten to become a permanent factor in Canadian political life. Sir Charles Ross, the inventor of the rifle which bears his name, is a Scottish baronet with an inventive and mechanical turn of mind who prefers pottering with machinery to living in his castles in Rosshire. Sir Charles, who is the ninth baronet, was born in Scotland in 1872, and was educated in Cambridge, where he rowed in the college eight. In the Boer war he raised and commanded a corps of Guides, but since then he has spent most of his time in Quebec where he superintends the operations of his factory. Sir Charles owns some 356,000 acres in Scotland.

Making The Grain Growers' Guide

Continued from Page 9

per year, the actual cost of preparing and mailing the fifty-two issues to each subscriber is over \$3.00 per year. The difference must be made up from advertisements. This simple fact will give the readers an idea of the importance which advertisements hold in every publication.

Lastly there is the mechanical department. After the editorial and advertising departments have done their work the mechanical department then produces the paper ready for mailing, and the circulation department sells and distributes it to the farmers all over the country.

Takes care of the fleeces. Keep them clean, but do not tub wash; roll, bale and ship properly, and market your wool co-operatively; you will get from two to eight cents per pound more than if otherwise handled.

Are you producing the greatest amount of the best quality pork with the least possible feed and labor?

Saskatchewan Homemakers' Convention

Continued from Page 4

cestors and descendants, the ancestors being the famous pipes of Pan and the descendants the concert flute, which moved in quite aristocratic company.

Medical Aid

Mrs. Cartridge, of Grand Coulee, filled the position of chairman at the Wednesday afternoon session with a tact and ability that was the envy of all her sister Homemakers. The first of her pleasant duties was to introduce Mrs. John McNaughtan, president of the Women's Section of the Saskatchewan Grain Growers' Association, who had come to address the convention on the subject of medical aid in rural districts.

Mrs. McNaughtan came before her audience armed with facts and figures which told their own tale of the cost of maternity in rural districts. The infant mortality rate was, she said, 74.81, and one woman in every three in the province of Saskatchewan was materially injured in childbirth. Thru the influence of the Homemakers' clubs a grant of \$25 for needy mothers had been secured from the government, with the stipulation that at least \$15 of this sum should be spent to defray the expense of a doctor's attendance. This was a step in the right direction, but it did not go far enough. The speaker went on to advocate inter-municipal hospitals, municipal nurses and asked the convention to think over the matter of establishing some system of midwifery such as existed in the old country.

First Ruthenian Club

The need of neighborliness on the part of the new neighbor, in this instance the Ruthenian settlers, was set forth with a quaint charm by Mrs. Kirstuke, of Theodore. To broaden the audience's understanding of her people Mrs. Kirstink began with a little sketch of the history of the Ruthenian or, more correct, the Ukrainian race. After a glimpse at their early freedom and happiness, she touched briefly, but feelingly, upon the misery which followed their betrayal by Russia and their bondage to that country, when to speak or write their own tongue was an offence against the law, when the men were sold into a partial slavery and the women were often made to be worse than slaves to their Russian masters. Whipped and scourged and beaten, education had died out among the peasant class, but their remained a quite large class of educated Ukrainians. The majority of those who had come to Canada belonged to the unschooled, many of them so ignorant that they scarcely knew themselves the race to which they belong, calling themselves Buckowinians, Austrians, or Galicians after the province or country from which they came.

The Homemakers' club that had been organized among her people in the district near Theodore had been largely due to the interest shown in her people by Dr. and Mrs. Aikins, of Theodore. At first they had merely hoped to interest some of the younger women in the district, but they had found some of the older women equally as enthusiastic. They had discussed at their meetings care of the sick, management of the children, health and gardening. Frequently they had read an article from an English magazine which had been translated into their own language. Mrs. Kirstuke summed up the advantages of the club in the statement that to make people better socially, morally and physically is to make them better citizens.

What Manitoba is Doing

Mrs. Dayton, of Virden, Man., brought news of the things that are being accomplished by the Home Economics Society in the sister province. From their own branch of the organization the movement for medical inspection of schools had spread to other towns and over the province until Manitoba had been divided into five districts with a nurse in charge of each. Rest rooms were being very generally established and were proving not only pleasurable to the country women but profitable to the town. Unofficially,

too, there existed among the prominent women of this society a sort of a helping hand organization for girls who had made the great mistake in life.

That books were indeed "a finer world within the world" was made so tangible and clear to the convention by Dr. Wilson, of Saskatchewan University, in an address on "Reading in the Home," that it will be surprising if bookshelves don't immediately begin to grow in numbers in the homes of those who listened to his inspiring lecture. The greater and more spiritual world to which books open the door was made very real, the speaker finding in this richer and fuller life the interpretation of such scriptural passages as, "I came that they might not only have life but have it more abundantly." A list of books of great cultural value has been prepared and will be printed in The Guide of a later date.

The Slavic Mother

The question contained in the title of the address delivered by Mr. Anderson, inspector of schools, from Yorkton, "What has Saskatchewan done for her Slavic mothers?" was answered with the statement that she has done very little, tho in his own inspectorial district of Yorkton some small beginnings had been made. The town of Yorkton had appointed one of the ablest teachers from the regular staff to teach the newcomers to our country in night school. This effort had met with the utmost sympathy from those whom it was designed to help, numbering among its attendants people of all ages. During its operation three hundred students had received a working knowledge of English. Field days are being held in connection with a number of the foreign schools, and the improvement in the use of the English language and the dress of the children is very remarkable from year to year. Mr. Anderson rated severely the neglect of the ordinary country school, where the scrubbing is done once or at most twice a year, where there is dirt around the door knobs and dust around the baseboards. The Ruthenian districts are much better in this respect, scrubbing and cleaning their schools twice a month. A new thought was introduced by the speaker in the suggestion that it was the English districts which should have the foreign teachers and the foreign districts should have the English teachers, in order that we might exchange our point of view. Nor was this as impracticable as one might think, since a great many foreign students were making a splendid record in scholarships and were doing excellent work as teachers. The inter-marriage of these races was another eventuality which had to be faced. As a means to the better understanding of these Slavic people he strongly recommended the reading of a book called "Our Slavic Fellow-Citizens," by Emily Balch.

Relation of Politics to Life

Politics, the supposedly evil and malign side of human life, was boldly introduced into the deliberations of the convention by Mrs. A. V. Thomas, who argued that politics touched every side of our lives, and that the sordidness of them was not a necessary attribute of politics, even of the party type, but a reproach to our own sense of honor and our ideals of citizenship. She pictured the woman of the past as resembling the child who runs out to the stable and asks daddy to take it for a ride, and who is set upon the horse and allowed to go around the yard with daddy's hand on the rein. But the woman of today, having accomplished her political emancipation, has struck the hand from the bridle and set forth upon the high road. The new power combined with organization will enable women to accomplish almost anything they undertake, and the striving for things will develop and bring out all the latent powers in them. The three things which the speaker hoped those present would do something very definite about were the teaching of sex hygiene to children, medical aid for rural districts and the study of international relations.

In a paper entitled "Our house beautiful," Mrs. Arthur, of Bradwell, pictured the ideal house as one of plain, soft toned walls, unobtrusive woodwork, and furniture that is at once good

to look upon and comfortable to use, with good prints of famous paintings upon the walls.

Insufficient Care for Children

"Farm conditions in this country are not such as will encourage the children to follow in our footsteps," was the conclusion of Mrs. S. V. Haight, vice-president of the Women's Section of the Saskatchewan Grain Growers' Association. Before country life could be made attractive we must have better rural schools and ones which trained the children to become farmers, both boys and girls. To show how little attention is now given to bettering conditions for children as compared with that expended upon material improvement she quoted some figures from the United States, which is far more advanced than ourselves in its care for children. The federal government at Washington spends annually for animal husbandry \$3,000,000, bureau of plant life, \$2,882,875, hog cholera, \$600,000, bureau of child welfare \$165,000, while

of medical inspection and was bombarded with questions at the conclusion of his very able address. He said that about 40 to 45 per cent. of the men who had volunteered to enlist were rejected as physically unfit, and a great deal of this physical incapacity could have been prevented if taken in hand at an early enough date. The average school was, he said, badly lighted, badly ventilated and badly heated and the sanitary arrangements were poor. As a result the depressing influence of the ordinary school upon the average child is greater than is generally realized. Children are also influenced by other people's habits of life. It is not to be expected that a child will lead a healthful life in unsanitary surroundings. By implication he suggested the substitution of physical culture and the study of the laws of health, for the old dry-as-dust physiology which concerned itself chiefly with the alimentary canal. Dr. Thompson looked forward to the day, and believed it not far distant, when a provincial school nurse would be ap-

PRESIDENT WOODROW WILSON AND HIS CABINET

Back row, left to right: President Wilson, William G. McAdoo, Secretary of the Treasury; Thomas W. Gregory, Attorney General; Josephus Daniels, Secretary of the Navy; David F. Houston, Secretary of Agriculture, and William B. Wilson, Secretary of Labor. Front row, left to right: Robert Lansing, Secretary of State; Newton D. Baker, Secretary of War; Albert S. Burleson, Postmaster General; Franklin K. Lane, Secretary of the Interior, and William C. Redfield, Secretary of Commerce.

our own Dominion government has the most elaborate bulletins concerning stock and grain, but not a single bulletin to distribute on food values or care of children.

School Medical Inspection

Dr. Thompson, chairman of committee for the revision of study and of medical inspection in schools, stirred up the greatest enthusiasm on the question

pointed to organize a system of school nurses over the whole province.

Dr. Snell, of the Saskatoon Normal school, defined the use of education as a means to enable a person to earn a livelihood, to be happy and to lead a worthy life while doing so, and to prepare him to make a proper use of his leisure time. He said a test had been made in the middle western states of the earning power resulting from edu-

education in rural communities, and it was found that men with very little education had an earning capacity of \$680, men who had gone thru the public school of \$742, thru the high school of \$1,268, and those who had taken a college training of \$1,720 per year.

A pleasant word of goodfellowship and an appeal to the Homemakers to lend their sympathy to the university in its efforts to establish a tradition for Saskatchewan of a wider appreciation and a broader knowledge of life was the contribution of S. E. Greenway, superintendent of the extension department of the university.

Fruit Growing Pointers

Mr. Lake, from the Battleford district, gave the convention what might be called tested recipes for growing fruit, which had been put into practice on his own farm and proven successful. After a word about the windbreaks, which are an inevitable factor in any scheme for growing fruit, the speaker gave a list of thoroughly hardy varieties of fruits. Of the red raspberries he recommended the Herbert and the Columbia; of black currants, the Boskoop Giant and Black Champion; of strawberries, the No Name, Dakota and Warfield; of red currants, Fay's Prolific; of white currants, White Grape; of gooseberries, Houghton and Barrie. For winter covering of strawberries he advised the use of slough hay, which should be removed in the spring two or three inches at a time, so as not to expose the plants to a too sudden change of temperature. The raspberries were left unprotected until after the very cold weather in January and February, when they were banked up with snow covered with straw and horse manure.

A brief history of the beginning of the Homemaker movement was given by Dean Rutherford, who went on to point out some practical avenues of work for the immediate future, such as medical inspection of schools, betterment of rural schools and the development of a better community spirit.

One of the pleasantest events of the convention was the tea given to the visitors by Mrs. Murray and Mrs. Rutherford at the president's residence on Thursday afternoon. Tho the weather man rather frowned upon the occasion his displeasure did not have any appreciable effect upon the merriment of the tea hour.

LIBERALS RETURNED TO POWER

The Liberals were again returned to power in the Nova Scotia legislature on June 20. The party of the Hon. G. H.

Li Yuan Hung

Formerly vice-president of China, who has been elevated to the head of the republic after the death of Yuan Shi Kai. President Li is a military leader and retains the support of the army, which was the former president's main source of strength. The new president is said to be held in high esteem by his countrymen, and is known as the "Savior of China."

last house, which was made up of thirty-eight members, there were twenty-five Liberals.

Premier Murray and all the members of his government were re-elected, the Liberal majority in some instances being comparatively high.

WOODWORKING SHORT COURSES

A movement will shortly be initiated in Manitoba to extend to a large number of provincial centres the benefits of manual training. The courses will average from a week to ten days, and the dates to be selected will be during the summer holidays. In order that any point might be favored with a course it must enrol at least fifteen or twenty boys over 12 years of age. The instructors who will assume charge of these courses are technical teachers either in

the Agricultural College or the Manual Training Departments of the Winnipeg public schools. In the matter of tools, the co-operative idea is being inculcated. The boys will get together in groups of five, and each boy will furnish two or three tools. In some centres the girls will also be given a course in sewing. In connection with each course one sports day will be arranged for, and at least one lecture on agriculture given by some member of the Agricultural College staff. At the close of the course, study clubs will be organized for the further study of agricultural subjects during the fall and winter months.

The places where courses will be held will be as follows: Oakville, Dugald, Minnedosa, McCreary, Souris, Grandview, Boissevain, Miami, Carberry, Minto, Poplar Bluff, St. Andrew, Swan River, Austin, Ninette, Belle Plaines, Birds Hill, Benito, Durban, Binacarth, Gladstone, Gilbert Plains, Pilot Mound, Morden.

DR. C. C. JAMES DEAD

Agriculture in general, and the Dominion Department of Agriculture in particular, has lost a most valuable servant thru the very sudden and wholly unexpected death of Dr. C. C. James on Friday, June 23, at St. Catharines, Ont. Death took place on a street car and was due to heart failure. Dr. James was widely known thru-out Canada. Born in 1863 at Napanee, Ont., after a distinguished high school and college course, in 1886 he was appointed Professor of Chemistry at the Ontario Agriculture College. In June, 1891, he commenced duties

as deputy minister of agriculture and secretary of the Ontario Bureau of Industries, a position which he occupied for 25 years, despite party changes in the government. He was then appointed agricultural commissioner of the department of agriculture for Canada, a position he held at his death. Dr. James will be best known thru the West for his intimate connection with making the recommendations upon which the Agricultural Instruction Act, passed in 1913, which provided \$10,000,000 for ten years to assist the provinces in carrying on education, instruction and demonstration in agriculture, was based. Dr. James had a broad grasp of conditions and untiring devotion to work. His death is a great loss and deeply regretted by agriculturalists thru-out the country.

THE HOLLIS RURAL CREDIT BILL

Continued from Page 17

outs of the Hollis measure. It is too profound a document for the uninitiated to fathom. To the best of our knowledge it merely creates an elaborate piece of governmental machinery to do the work of handling the farm mortgage business of the country, adding the features of amortized repayments of principal and the co-operative plan of borrowing, two features which we believe American farmers will be slow to use. So far as we can see, in our present woeful and inadequate grasp of the Hollis measure, it is not only a sop to public clamor but also smacks of a paternalistic attitude toward the average farmer which we do not relish.

The Farmers' Market

WINNIPEG MARKET LETTER

(Office of The Grain Growers' Grain Company Limited, June 26, 1916)

Wheat—During the week ending June 24th our wheat markets have been steady and generally quite active. On Monday there was a sharp recovery from the break of Saturday previous and on Tuesday markets closed higher again. During the latter part of the week American markets were weak and Chicago July sold below the dollar mark, but Winnipeg prices held firm owing to heavy government purchases. The cash wheat prices have also remained about the same, with slightly wider discounts on contract grades. The demand continues steady with apparently enough offerings at all times to satisfy requirements.

Oats—Future prices declined 1½ cents for July and advanced ½ cent for October. There has been a good volume of trading, but heavier receipts will require steady buying to hold the market firm. Cash oats are still at good premiums. Two Canada western oats are receiving 1½ cents premium and Three's ½ cent premium.

Barley—Was quiet and higher in price. Offerings are small and readily taken. On the week's business prices show a gain of 1 cent on all grades.

Flax—Was quiet and lower again. July shows a decline of 1½ cents, October ½ cent. This puts the October futures at a premium of 3½ cents over July.

STOCKS IN STORE

The following figures show the approximate amount of grain in store in country elevators (interior) west of Winnipeg, June 21, 1916:—

	This Year	Last Year
Wheat	20,357,340	2,770,970
Oats	5,271,335	917,245
Barley	718,820	139,581
Flax	239,606	99,701

The Livestock Markets

Toronto, June 23.—Half the cattle arriving here this week were grass fed ranging from 50-75 cents per hundred lower than dry fed. The unusual prices are resulting in the marketing of too many unfinished cattle. All good cattle are selling very high, bringing \$9.25 to \$10. The market for unfinished steers is lower. Stockers are bringing \$7.50-\$8.25 for the best. From \$6.50-\$7.50 for medium to good. Choice bulls brought \$8-\$8.75 and medium \$6.50-\$8. Hogs are selling at \$11.35-\$11.50 fed and watered.

Alberta, June 24.—The Livestock Department of the Alberta Farmers' Co-operative Elevator Co. reports last week's Alberta stockyards receipts as: Horses, 190; cattle, 1,018; hogs, 2,730; sheep, 335. This week's Alberta stockyards receipts: Horses, 273; cattle, 1,285; hogs, 3,062; sheep, 673. Outward shipments were two cars cattle Edmon-

WINNIPEG and U.S. PRICES

Closing prices on the principal western markets on Saturday, June 24, were:—

Cash Grain	Winnipeg	Minneapolis
1 Nor. wheat	\$1.10½	\$1.12½
2 Nor. wheat	1.09	1.07½
3 Nor. wheat	1.05½	1.03
3 white oats	.45½	.38
Barley	59½-68½	63-72
Flax, No. 1	1.56½	1.78½
Futures—		
July wheat	1.10½	1.08½
Oct. wheat	1.07½ (Sept.)	1.07½
Dec. wheat	1.06½	1.08½

ton, one car Winnipeg, two South St. Paul; twenty cars hogs Toronto, six cars Winnipeg, two decks sheep Edmonton, no shipments west on account of interrupted train service.

The market on both dry and grassy fat cattle received a great knockout this week. On Tuesday we sold a car of steers at \$7.85 and on Thursday the eight McIntyre carloads of cows sold here for 7 cents. Very top for choice steers Thursday 7 cents. No steers changed hands yesterday. We sold some top cows for \$5.75 and at \$5.50 to \$5.60. Heavy supplies and restricted outlet, due to lower markets elsewhere, caused the drop. Also the price of dressed beef has been reduced by the packers. Stock cattle are unsteady, due to the fall in the price of beef.

The price of hogs advanced to \$10.15 Thursday and to \$10.30 Friday, due to heavy Eastern demand. This week we handled 16 per cent. of the hogs and 6 per cent. of the cattle consignments.

Winnipeg, June 26.—The Livestock Department of The Grain Growers' Grain Co. report receipts of livestock last week as follows: Cattle, 2,500; calves, 300; sheep and lambs, 65; hogs, 6,400. With heavy receipts there were practically no good stall feed cattle offered. One extra choice car of steers sold early in the week at \$10.10, but apart from these there were few cattle good enough to bring over \$8.50. Stockers and feeders were in demand at easier prices. We do not look for any improvement in the cattle trade next week. There was a fair run of veal calves again last week. Choice stuff weighing from 125 to 200 pounds brought \$7.60 and \$8.50, common to fair \$6 to \$7. Sheep and lambs continue to be scarce. Good quality sheep bring \$6.75-\$7.50 and choice lambs \$8-\$9.

Hogs—The market opened first of last week with selects selling at \$10.15 fed and watered. Tuesday \$10.25, Wednesday \$10.50-\$10.60, Thursday the price ran to \$11, closing for the week Friday at \$10.90. Advance in hog market due to strong competition by Eastern packers. Hogs today are selling for \$10.90.

An outstanding feature on all the markets last week was the steadily increasing number of half finished grassy stock finding its way to market. This stock is not only losing money from the standpoint of not having reached its greatest profitability, but the number coming forward is depressing the market unduly. There should not be any real excuse for the selling of much of this stock at the present time for prices are not apt to slump enough to curtail profits on this stock even if held some time. Much of this stock could and should be held for several weeks longer, for it is a losing proposition to everybody in its present state.

Country Produce

Winnipeg, June 26.—Note: Prices quoted are f.o.b. Winnipeg unless otherwise stated.

Butter—Dairy butter remains unchanged since last week. Fancy dairy is 21-23 cents, No. 1 20 cents and round lots 17-19 cents.

Eggs—Eggs are 23 cents, which is practically the same as last week's prices. Buyers are plentiful.

Cream—Sweet cream is lower in Winnipeg by at least a cent, quoted 31 cents, and sour cream, No. 1 and 2 grades, at 29 and 27 cents respectively. The spread between sweet and sour is usually greater, but the absence from the city of a lot of people on holidays and consequent decline in sweet cream demand for household and ice cream purposes has depressed the price of sweet cream and the supply is considerably more than necessary. Of course this is preferable for butter making, but the same premium is not being paid as usual.

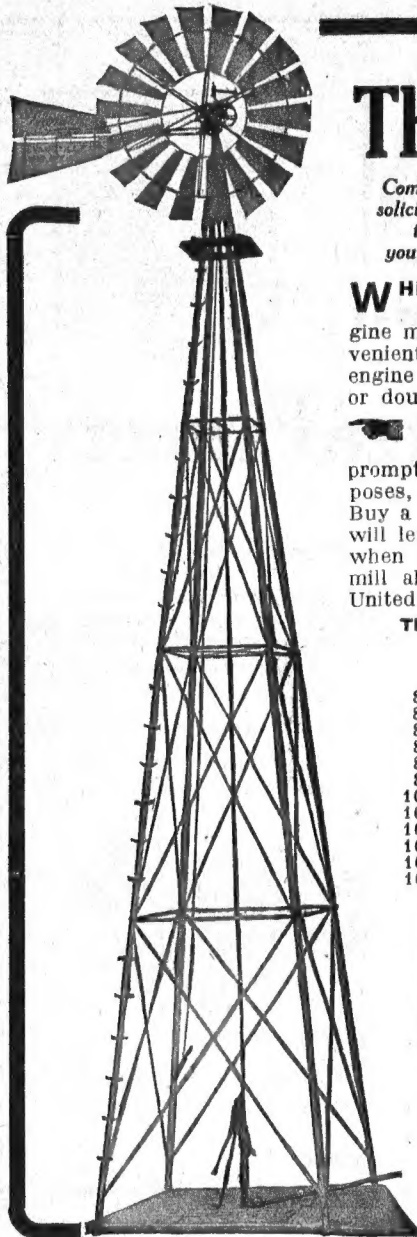

Hay—The hay market is flooded in Winnipeg. Tracks are overloaded with cars and there is a big decline in prices. Timothy is quoted at 16-17 cents, clover and timothy at 14-15 cents with a greater decline in other grades.

catalogue

WHEN the farmer has other work such as running a cream separator, washing machine, and any other light work on the farm, or where his well is close to a building so that an engine may be belted to a line shaft or attached direct to the pump, then a small engine is very convenient. These engines more fully described and illustrated in our catalogue. Either style engine furnished with combined pump jack or with independent jack. Either single geared or double geared jack may be supplied.

This illustration represents one of the most reliable pumping windmills sold in Western Canada and is the only one manufactured West of the Great Lakes—always ensuring prompt delivery of repairs. Wind power is cheaper than gasoline power for pumping purposes, especially for pastures or where a large supply of water is required daily. Buy a Manitoba Windmill with regulator and your watering problem is solved. The regulator will let the mill in gear as the supply of water is taken from the tank and will close it off when the tank is full. The wind in Western Canada is constant enough to make a windmill absolutely reliable. More than 110,000 of these outfits are in use to-day in Canada, United States and Australia.

THE ONLY WINDMILL WHICH PULLS INTO THE WIND AND THIS MAKES IT AS NEAR
ABSOLUTE STORM RESISTING AS A WINDMILL CAN BE BUILT. SEE PAGES
40-46 OF OUR GENERAL CATALOGUE FOR FURTHER INFORMATION

Alberta Provincial Schools of Agriculture ^{At} Claresholm, Olds and Vermilion

RECRUITS WANTED!

Recruits are wanted to enter upon the course of training in practical and scientific agriculture provided free at these schools of agriculture. Farmers' sons and daughters can best perform their services for the Empire if properly equipped to fulfil efficiently their duties of cultivating the soil, raising livestock or making the farm home run smoothly.

1916-17 session begins October 31st, 1916. Complete agricultural courses in both first and second year. These comprise every branch of agricultural knowledge, practical and technical, and training in the solution of every useful problem presented to the farmer; in addition, courses in Domestic Science and Household Economy will be given for the girls. These are supplied entirely free of charge.

CO-OPERATION

That got Grain Shipments from these Three Farmers

Bernice, Man.,
May 8, 1916.

"I received your letter saying Grade was raised to No. 2 Northern with 1% dockage. I am very well pleased with the way in which you handled that car; also the two I sent you last Fall."

(Name on request).

Kylemore, Sask.,
May 9, 1916.

"I have been well pleased with the out-turns and the price and your prompt method of giving returns. In the past seven years The G.G.G. Co. have handled for me in the most acceptable manner upwards of twenty-five cars of all kinds of grain."

(Name on request).

Seven Persons, Alta.

Mar. 1, 1916.

"Thanks for the quick returns and square dealing that I received from you in the handling of my car of grain. I am well pleased."

(Name on request).

and thousands of others, has made it possible for farmers of the Prairie Provinces to get the commodities shown or listed below, through a Company of their own. Almost 18,000 farmers in Western Canada are now shareholders in this Company.

PRICE
\$100.00

G.G.G. BUGGIES and DEMOCRATS are made from the best materials available by the biggest manufacturers of vehicles in the world. Every rig is fully guaranteed.

PRICES:

Runabout	\$63.00
Buggies from	\$73.50 to \$100.00
Democrats—2 seats,	\$84.00
3 seats	\$119.00

CREAM SEPARATORS

You do not need to pay the figures you have been asked for a real high grade Cream Separator. The "Upsala" described in the Supplement to our 1916 Catalog, just off the press, is as good as any machine built; it can be supplied with or without iron stand.

Capacity per hour.	Price
230 lbs.—Without stand	\$30.00
350 lbs.—Without stand	41.00
350 lbs.—With stand	45.50
450 lbs.—Without stand	45.50
450 lbs.—With stand	51.25

We also carry the "Favorite" which sells at \$14.50 for 100 lbs. capacity, and \$18.00 for 150 lbs. capacity; also the "Toro," capacity of 310 lbs. and price, \$24.50.

Authorized capital \$2,000,000.00
Subscribed capital over 1,300,000.00
Reserve fund 340,000.00

Grains purchased on track or handled on consignment.

Livestock handled on commission through our Office in the Union Stockyards, St. Boniface, Manitoba.

Farm Machinery and General Commodities supplied to farmers of the West at prices as close as possible to manufacturers' cost. Distributing warehouses at Winnipeg, Regina and Calgary.

PLOWS - Any kind you want

Price \$80.50

built specially for use in Western Canadian soils—high-grade materials used throughout.

Prairie Breakers—12 inch, 14 inch and 16 inch \$20.50, \$22.50 and \$25.00.

Steel Beam Stubble Plow—\$15.50, \$17.25; and \$19.50.

High Lift Sulky Plow—14 inch, 16 inch and 18 inch, \$50.00; \$51.25 and \$53.00.

Foot Lift Gang Plow—12 inch and 14 inch, \$80.50 and \$82.00.

Write for description and prices of any plow you need.

SEWING MACHINES

In equipment and finish, as well as in quality of work done and wearability, G.G.G. Sewing Machines are equal in every way to the best of the high priced machines that have been sold throughout the West. Every machine carries a ten-year guarantee. Consult Pages 20 and 21 of our Supplement to the 1916 Catalog for full description.

PRICES:

The G.G.G. Special	\$30.00
The G.G.G. No. 1	20.50
The G.G.G. No. 2	19.00

PRICE
\$106.00

G.G.G. MANURE SPREADERS are built to work right and to last a life time. This is a real low-down Spreader and has a double reach which takes the strain from the box.

PRICES:

60 bus. capacity	\$106.00, 70 bus. capacity	\$116.00,
90 bus. capacity	\$138.00.	

HAYING MACHINERY

The Hay Rakes and Mowers handled by us this year are second to none. The frame of the Mower is a solid one-piece square casting which holds the working parts in proper relation with each other; the crank shaft is located so as to allow the pitman to travel as nearly as possible parallel with the cutting bar. G.G.G. Mowers have few parts and are simple in construction.

PRICES:

MOWERS:	HAY RAKES:
5 ft. cut \$49.50	10 ft. width \$30.75
6 ft. cut 50.50	12 ft. width 35.75

SURFACE OR SUB-SURFACE WHEELS

8½, 10, 11 and 15
Foot Widths

G.G.G. SOIL PACKERS—Surface and sub-surface packer wheels are interchangeable; patent dust-proof axles hold enough lubricant for the ordinary work of a season. Built in sizes to suit two, three or four horses. Wheels 20 inches in diameter.

PRICES:

\$54.00 to \$81.25.

Write us also for Packer Attachments for your Plow.

G.G.G. DRAG HARROWS—4-horse Boss Harrows, 26 ft. wide, \$22.25. Lever Harrows, 15 ft. wide, \$23.60; 20 ft. wide, \$32.50. Diamond Spike Tooth Harrow, 4 sections, 16 ft., \$15.60; 6 sections, 24 ft., \$27.00. Single sections, \$3.45.

We can also supply Harrow Carts and Harrow Attachments for your plow.

We carry practically a complete line of farm implements and general supplies needed by farmers throughout the Prairie Provinces. Write us for particulars, or call at one of our Branch Offices before you buy. **Write for our Power Farming Catalog** and note details about the Grain Growers' Special Tractor and Threshing Separators built to be used with it. See the tractor at Brandon Fair.

When you have cattle, sheep or hogs ready for market, do not fail to use our **Livestock Commission Department, Union Stock Yards, St. Boniface, Manitoba.** This department is under capable management and thoroughly equipped to look after individual or co-operative shipments.
